and around the world The letters begin with his arrival in America as a young man eager to establish himself away from the confines of postwar England and carry us through his bumpy early career in medicine and the discovery of his writer's voice his weight lifting motorcycle riding years and his explosive seasons of discovery with the patients who populate his book Awakenings his growing interest in matters of sight and the musical brain his many friendships and exchanges with writers artists and scientists to say nothing of astronauts botanists and mathematicians and his deep gratitude for all these relationships at the end of his life Sensitively introduced and edited by Kate Edgar Sacks's longtime editor the letters deliver a portrait of Sacks as he wrestles with the workings of the brain and mind We see through his eyes the beginnings of modern neuroscience following the thought processes of one of the great intellectuals of our time whose words as evidenced in these pages were unfailingly shaped with generosity and wonder toward other people **Neuroscience and Art** Amy

Ione, 2024-08-27 This book is focused on how understanding ourselves as humans is incomplete without considering both biological and cultural aspects Using the neurocultural perspective the book explores how everything in the world is filtered back and forth through the brain and culture The thrust of the book therefore is to explore the power of art in creating a bridge between cultural and neuroscientific lines of inquiry Looking at both clinical and non clinical populations the text examines historical foundations distinguishes congenital developmental conditions from those that are acquired and emphasizes how the brain constructs our sensory experiences Several distinctive features separate this research from other publications First the book opens with a review of how the historical literature is still etched into the ideas we employ to explain elements across the interdisciplinary fields of art aesthetics our sensory experience psychology cognition and well being Second the research adopts a humanistic rather than a philosophical or social science perspective in demonstrating the value of coupling anatomy and physiology with the natural and social environment In this artists from all genres are incorporated Among them are Iris Murdoch Ludwig van Beethoven Leonardo da Vinci Cristoforo de Predis Rembrandt Federico Fellini Chuck Close and David Hockney Case studies demonstrate how neuroscientific research meshes with art individual and cultural variables in ways that range from health and well being to physiological decline and biological traumas These include a case study that examines how Oliver Sacks combined biology and biography in his writings It also explores art projects in several genres inspired by his studies Another case study is on the role of film as a useful clinical tool Here the book also demonstrates that cinematic devices used by filmmakers intersect with perceptual and cognitive neuroscience A defining feature of the analysis is the integration of research on brain injuries with humanistic responses in film literature and the visual arts This section outlines the lack of consensus regarding the causes and treatment of shell shock in World War I before introducing how research and art now work with PTSD TBI Finally the book examines therapeutic cases of professional and non professional artists concluding with a discussion of synesthesia and the senses
