Oracle e-Business Consultancy Handbook John Priestley, 2012-04-01 This book is based on my experiences as a consultant over a period of thirteen years the first four of them working for Oracle In those years I had the titles Manufacturing and Financials Consultant on different sites The essays in this book are largely designed to cover the more complex areas of the system including intercompany and internal sales orders outside processing and consignment stock They also cover procedures which may be needed in every factory how to check stock or how to investigate stock losses The SQL scripts to give easy to use reports which can be downloaded into Excel So many Oracle reports are difficult to use especially where there is a lot of data The SQL scripts also deal with the problems which occur after a site has gone live such as clearing up ahead of the inventory monthend Some queries notably in BOM and Routing validate data Quantifying Congestion: User's guide ,1997

Laboratory, 1978 *Vehicle Speeds and Operating Costs* Thawat Watanatada, Ashok M. Dhareshwar, Paulo Roberto S. Rezende Lima, 1987 Road user costs are the largest cost elements in road transport Improvements in road conditions can yet pay substantial dividends by reducing vehicle operating costs Expressing vehicle operating costs in relation to road

characteristics geometry and pavement condition is the logical approach For certain cost components especially fuel consumption the required data can be obtained by controlled experiments Vehicle maintenance costs utilizing extensive road user surveys are needed This volume takes an aggregate mechanistic view of vehicle speed and operating costs under free flow conditions Basing their analysis on the mechanistic principles of propulsion and motion as well as on postulated assumptions of driver behavior the authors arrive at predictions at three levels of detail ranging from a simulation method for use in detailed geometric design at the link level to an aggregate method for use in investment planning at the sectoral level The models were estimated using the comprehensive database collected in the Brazil UNDP World Bank highway research project and were validated along with data sets from India One of the significant contributions to highway economics research made in this study is the probabilistic limiting velocity approach to steady state speed prediction which combined with the aggregate mechanistic methodology will provide a possible basis for future research on the far more complex problem of operating costs under congested conditions
