

CHAPTER 9

AIRCRAFT ORDNANCE

As an Airman, you might be assigned to the armament branch of an aircraft squadron, the weapons department of a naval air station, or an aircraft carrier. Regardless of where you are assigned, you will work around aircraft armament systems and various associated weapons. Aviation Ordnancemen (AOs) handle aircraft ordnance. They work with aircraft guns and pyrotechnics. They also maintain bombs, rockets, missiles, mines, and torpedoes. They maintain the aircraft weapons releasing and launching equipment necessary for disbursing such items. AOs are familiar with the safety precautions for working with such material. Personnel directly involved in ordnance handling must be qualified and/or certified according to the Navy's current qualification/certification program. You may not be assigned in an area that requires direct contact with ordnance. You must still be familiar with the basic characteristics of ordnance and hazards peculiar to aircraft ordnance.

LEARNING OBJECTIVES

When you have completed this chapter, you will be able to do the following:

1. Describe common terms and definitions associated with aircraft ordnance.
2. State the method for identification and marking of ammunition.
3. Explain the purpose and types of aircraft bombs.
4. Identify the types, uses, and basic characteristics of air-launched guided missiles and guided missile launchers.
5. Identify the components of the M61A1 and M61A2 automatic gun and recognize the operating principles.
6. Define the purpose and use of hand-manipulated signaling devices.
7. Describe the types, uses, and basic characteristics of cartridges and cartridge-activated devices.
8. Identify the purpose and use of bomb racks.

TERMINOLOGY

AOs use special terminology on the job. To understand this chapter, you should know these terms. A few of the more common terms and definitions are as follows:

Ordnance

Military material (such as combat weapons of all kinds) with ammunition and equipment required for its use. Ordnance includes everything that makes up a ship's or aircraft's armament. This includes guns, ammunition, and all equipment needed to control, operate, and support the weapons.

Propellant

The material that provides the energy for propelling a projectile, specifically an explosive charge for propelling a bullet, shell, or the like. It may also be a fuel, either solid or liquid, for propelling a rocket or missile.
