Advances in Cryptology - CRYPTO 2004 Matt Franklin, 2004-08-04 This book constitutes the refereed proceedings of the 24th Annual International Cryptology Conference CRYPTO 2004 held in Santa Barbara California USA in August 2004. The 33 revised full papers presented together with one invited paper were carefully reviewed and selected from 211 submissions. The papers are organized in topical sections in linear cryptanalysis group signatures foundations efficient representations public key cryptanalysis zero knowledge hash collision secure computation stream cipher cryptanalysis public key encryption bounded storage model key management and computationally unbounded adversaries. *Formal Methods and Software Engineering* Toshiaki Aoki, Kenji Taguchi, 2012-10-29 This book constitutes the refereed proceedings of the 14th International Conference on Formal Engineering Methods ICFEM 2012 held in Kyoto Japan November 2012. The 31 revised full papers together with 3 invited talks presented were carefully reviewed and selected from 85 submissions. The papers address all current issues in formal methods and their applications in software engineering. They are organized in topical sections on concurrency applications of formal methods to new areas quantity and probability formal verification modeling and development methodology temporal logics abstraction and refinement tools as well as testing and runtime verification. **Scientific Papers of the Bureau of Standards** United States. Reaching a State of Hope Mikael Byström, Pär Frohnert, 2013 International migration and migrants have long been among the most debated topics in Europe and around the globe. How do immigrant policies differ between different nation states? How are migrants and refugees met? Conflicting opinions on migration are not new. History gives ample examples of varying solutions and views. In *Reaching a State of Hope* the authors shed new light on refugee and labour immigration to twentieth century Sweden. They focus on themes such as refugee policies and refugee relief and reception. The discourse on the relation between refugees labour migration immigration and the trade unions is another focus of this anthology. The essays are set against the background of the Swedish welfare state from its first emergence before the Second World War until the 1990s. In 1930 Sweden had a population where only a fragment had foreign backgrounds but seventy years later it had become a country of notable immigration. This is the first time historians have taken up the challenge of presenting the Swedish experience to an international audience with distinguished Swedish and international historians collaborating to put the Swedish case into a European context. This is a significant contribution to the field of European migration history and will make invaluable reading for scholars of history as well as anyone interested in migration politics and issues related to international migration and welfare states. **Sparse Optimization Theory and Methods** Yun-Bin Zhao, 2018-07-04 Seeking sparse solutions of underdetermined linear systems is required in many areas of engineering and science such as signal and image processing. The efficient sparse representation becomes central in various big or high dimensional data processing yielding fruitful theoretical and realistic results in these fields. The mathematical optimization plays a

fundamentally important role in the development of these results and acts as the mainstream numerical algorithms for the sparsity seeking problems arising from big data processing compressed sensing statistical learning computer vision and so on This has attracted the interest of many researchers at the interface of engineering mathematics and computer science Sparse Optimization Theory and Methods presents the state of the art in theory and algorithms for signal recovery under the sparsity assumption The up to date uniqueness conditions for the sparsest solution of underdetermined linear systems are described The results for sparse signal recovery under the matrix property called range space property RSP are introduced which is a deep and mild condition for the sparse signal to be recovered by convex optimization methods This framework is generalized to 1 bit compressed sensing leading to a novel sign recovery theory in this area Two efficient sparsity seeking algorithms reweighted l1 minimization in primal space and the algorithm based on complementary slackness property are presented The theoretical efficiency of these algorithms is rigorously analysed in this book Under the RSP assumption the author also provides a novel and unified stability analysis for several popular optimization methods for sparse signal recovery including l1 minimization Dantzig selector and LASSO This book incorporates recent development and the author's latest research in the field that have not appeared in other books
