Boeing 777 Study Guide, 2019 Edition Rick Townsend, 2018-12-22 The Boeing 777 Study Guide is a compilation of notes taken primarily from flight manuals but also includes elements taken from class notes computer based training and operational experience. It is intended for use by initial qualification crewmembers and also for systems review prior to recurrent training or check rides. The book is written in a way that organizes in one location all the buzz words acronyms and numbers the average pilot needs to know in order to get through qualification from an aircraft systems standpoint. The guide covers 777 200 and 777 300 series airplanes. The author is a retired Air Force Fighter pilot with flight experience in seven different aircraft types including the F 101 F 106 and F 15 and instructional experience in the T 33 F 101 and AT 38B aircraft. He also consulted on the acquisition and development of the F 22 and helped to write the F 22 operating manual. Transitioning to the airline world in 1990 he began writing and publishing transport category aircraft study materials and software guides. He holds type ratings in Boeing 727 737 757 767 and 777 aircraft as well as the Airbus A320 series aircraft. He has over 17 000 flight hours and has written seven titles which have sold a total of over 100 000 volumes. He retired with over 27 years work as an airline captain certification as a flight engineer check airman and management work in the area of managing operational specifications for a major airline.

Investigating Human Error Barry Strauch, 2017-03-16 In this book the author applies contemporary error theory to the needs of investigators and of anyone attempting to understand why someone made a critical error how that error led to an incident or accident and how to prevent such errors in the future. Students and investigators of human error will gain an appreciation of the literature on error with numerous references to both scientific research and investigative reports in a wide variety of applications from airplane accidents to bus accidents to bonfire disasters. Based on the author's extensive experience as an accident investigator and instructor of both aircraft accident investigation techniques and human factors psychology it reviews recent human factors literature summarizes major transportation accidents and shows how to investigate the types of errors that typically occur in high risk industries. It presents a model of human error causation influenced largely by James Reason and Neville Moray and relates it to error investigations with step by step guidelines for data collection and analysis that investigators can readily apply as needed. This second edition of Investigating Human Error has been brought up to date throughout with pertinent recent accidents and safety literature integrated. It features new material on fatigue distraction eg mobile phone and texting and medication use. It also now explores the topics of corporate culture safety culture and safety management systems. Additionally the second edition considers the effects of the reduction in the number of major accidents on investigation quality the consequences of social changes on transportation safety such as drinking and driving cell phone use etc the contemporary role of accident investigation and the effects of the prosecution of those involved in accidents.
