NDE Handbook Knud G. Bøving, 2014-05-12 NDE Handbook Non Destructive Examination Methods for Condition Monitoring deals with monitoring of equipment structures and pipes in mechanical engineering in the processing industry in construction and in electrotechnical fields The book explains acoustic cross correlation involving leak detection in buried main water pipes or heating pipes by using special instruments to detect the flow noise generated at the point of fracture The acoustic emission method based on collection of vibrations or sound waves from the suspected material can detect changes occurring in the material Magnetic methods and eddy currents can measure the thickness of the coating on specific materials dye penetrants can expose cracks or cleavages in surface materials and emission spectroscopy can identify or sort the chemical composition of steel The book also describes an endoscope used to visualize the interior of objects and the electrical resistance probe that can measure the loss of material based on changes in the electrical resistance Other NDE methods that are used by investigators include stress pattern analysis by thermal emission pulsed video thermography Moire contour mapping holographic interferometry computerized tomography and positron annihilation The book will prove valuable for engineers physicists technicians operators involved in material research risk prevention or accident control and for general readers interested in materials quality and specifications *Transient Electromagnetic-Thermal Nondestructive Testing* Yunze He, Bin Gao, Ali Sophian, Ruizhen Yang, 2017-05-25 Transient Electromagnetic Thermal Nondestructive Testing Pulsed Eddy Current and Transient Eddy Current Thermography covers three key areas of theories methods and applications primarily the multi physics field including eddy current heat conduction and Infrared radiation for defect evaluation lateral heat conduction which is analyzed to detect parallel cracks and longitudinal heat conduction which is analyzed to detect depth defect or that which is beyond skin depth In addition the book explores methods such as time domain frequency domain and logarithm domain also comparing A scan B scan and C scan Sections on defect identification classification and quantification are covered as are advanced algorithms principal components analysis PCA independent components analysis ICA and support vector machine SVM The book uses a lot of experimental studies on multi layer aluminum structures honeycomb structure CFRP in the aerospace field and steel and coating in the marine rail and transportation fields Presents two kinds of transient NDT testing from theory and methodology to applications Includes time domain frequency domain and logarithm domain which are all analyzed Introduces A scan B scan and C scan which are compared Provides experimental studies for real damages including corrosion and blister in steel stress in aluminum impact and delamination in CFRP laminates and RCF cracks are abundant Materials Evaluation, 2006 **Subject Guide to Books in Print**, 1993
