Advanced Research Methods In The Built Environment:

Advanced Research Methods in the Built Environment Andrew Knight, Les Ruddock, 2009-03-16 This book provides a bridge between the introductory research methods books and the discipline specific higher level texts Its unique feature is the coverage of the detailed process of research rather than the findings of research projects Chapter authors have been carefully selected by their expertise discipline and location to give an eclectic range of perspectives Particular care has been taken to balance positivist with interpretivist approaches throughout The authors focus is on the practical consequences of research philosophies strategies and techniques by using their own research and by evaluating the work of others Advanced Research Methods in the Built Environment addresses common topics raised by postgraduate level researchers rather than dealing with all aspects of the research process Issues covered range from the practicalities of producing a journal article to the role of theory in research The material brought together here provides a valuable resource for the training and development of doctoral and young researchers and will contribute to a new sense of shared methodological understanding across built environment research

Research Methods for Construction Richard F. Fellows, Anita M. M. Liu, 2015-07-07 Research Methods for Construction will help you instil rigour into your problem solving and into your reports and publications It will be of value to construction surveying architecture and civil engineering students undertaking research whether for bachelors and masters degree dissertations or for masters and doctoral research degree theses Now in its Fourth Edition this remains one of the few books to provide guidance on research formulation methodologies and methods specifically for construction students Three main sections Producing a Proposal Executing the Research and Reporting the Results discuss the key issues in research and examine the primary approaches both qualitative and quantitative The methods adopted for scientific and engineering experiments model building and simulations are discussed as well as those employed for research into management social and economic issues The authors examine the requirements for data and analysis including the important statistical considerations and a range of qualitative techniques that enable construction researchers to appreciate what needs to be evaluated in devising how research may be carried out effectively and efficiently This new edition has been updated to reflect current debates and concerns including ethical issues legislation and codes of practice concerning the collection processing storage use and disposal of data Pressures of time and funding to carry out the empirical work all too often lead to a lack of attention to how the study should be done and why The authors address the importance of explaining the philosophical approach adopted ontology epistemology and the consequent methodology They advocate close scrutiny of

the methods available for appropriateness both academically and practically The fundamental theme of the book remains to facilitate a researcher s informed and justified selection of a philosophical paradigm and of appropriate methods to execute the research **Research Methodology in the Built Environment** Vian Ahmed,Alex Opoku,Zeeshan Aziz,2016-03-10
