Data analysis has evolved and today not work already only observable variables but also latent variables or factorials In this case the underlying data structures are rather less apparent and new specialized software can detect them through the analysis of an array of data correlations or covariances Design and modelling has changed a lot in the last two decades The researcher used to work exclusively with observable variables when all the underlying structures were clear and obvious but the need for the measure in the social sciences by unobservable variables drove the evolution of modelling in this sense in all the sciences In this way appear causal models structural equation or covariance structures developed by Joreskog 1973 Keesing 1972 and Wiley 1973 and expanded in LISREL Linear Structural Relationship model and other models that proposed the analysis of covariance structures different representations The book essentially develop the following topics
