Rasmussen,2008 The chapters in this volume convey insights from mathematics education research that have direct
implications for anyone interested in improving teaching and learning in undergraduate mathematics This synthesis of
research on learning and teaching mathematics provides relevant information for any math department or individual faculty
member who is working to improve introductory proof courses the longitudinal coherence of precalculus through differential
equations students mathematical thinking and problem solving abilities and students' understanding of fundamental ideas
such as variable and rate of change Other chapters include information about programs that have been successful in
supporting students' continued study of mathematics The authors provide many examples and ideas to help the reader infuse
the knowledge from mathematics education research into mathematics teaching practice University mathematicians and
community college faculty spend much of their time engaged in work to improve their teaching Frequently they are left to
their own experiences and informal conversations with colleagues to develop new approaches to support student learning
and their continuation in mathematics Over the past 30 years research in undergraduate mathematics education has
produced knowledge about the development of mathematical understandings and models for supporting students'
mathematical learning Currently very little of this knowledge is affecting teaching practice We hope that this volume will
open a meaningful dialogue between researchers and practitioners toward the goal of realizing improvements in
undergraduate mathematics curriculum and instruction Teaching Mathematics in Grades 6 - 12 Randall E.
Groth,2012-08-10 A journey into the vibrant and intriguing world of mathematics education Teaching Mathematics in Grades
6-12 explores how research in mathematics education can inform teaching practice in grades 6-12 The author shows
secondary mathematics teachers the value of being a researcher in the classroom by constantly experimenting with methods
for developing students' mathematical thinking and then connecting this research to practices that enhance students'
understanding of the material The chapters in Part I introduce secondary teachers to the field of mathematics education with
cross cutting issues that apply to teaching and learning in all mathematics content areas The chapters in Part II are devoted
to specific mathematics content strands and describe how students think about mathematical concepts The goal of the text is
to have secondary math teachers gain a deeper understanding of the types of mathematical knowledge their students bring
