What is Arduino? First we will look at all parts of Arduino. Arduino is actually a small computer that can connect to electrical circuits. The Arduino Uno is powered by the Atmega 328P chip which is the largest chip on the board see photo note in the picture above. This chip is able to perform programs stored in its memory very limited. We can download applications to the chip via USB using Arduino IDE download this if you have not already done so. The USB port also enables Arduino. Alternatively we can power the built in board using a power jack in which case we do not need a USB connection. Arduino has a few rows of pins that we can connect wires to. The power pins are labeled in the image above. Arduino has both 3.3V or 5V specifications. In this section we will use the 5V supply but you can get chips or items that require 3.3V to work in which case the 3.3V supply will be useful. You will also find some pins marked GND in Arduino these are ground pins ground the same thing as 0V. Get up to speed on the Arduino board and essential software concepts quickly. Learn basic techniques for reading digital and analog signals. Use Arduino with a variety of popular input devices and sensors. Drive visual displays, generate sound and control several types of motors. Connect Arduino to wired and wireless networks. [Arduino Projects for Beginners](#) Jason A Guillen, 2025-10-23.
