Wireless Sensor Networks Home Area Networks language English abstract The objectives of this research are To propose a scheme to estimate the future interference and enable efficient channel switching mechanism to avoid interference for Wireless Sensor Network WSN as per the latency requirements specified by Smart Grid SG To propose an algorithm for efficient data recovery mechanism so that ZigBee devices can quickly familiarize with the encoding according to the highly dynamic WiFi traffic To propose an efficient frequency shifting mechanism for different frame sizes of data under interference conditions to guarantee the reliable data transmission within the delay requirements of the SG To propose an effective mechanism to guarantee the ZigBee communications within the maximum tolerable delay under the coexistence of WiFi for carrying out effective smart home solutions To propose an algorithm based on effective transmission power control to increase WSN life time under coexistence scenarios for efficient monitoring and controlling purposes at smart homes With the introduction of Information and Data Communication Technology ICT to the present electrical power systems the traditional electrical grid system is becoming more intelligent and adaptive The ICT successfully establishes bi directional communication between Utility companies and the consumer for improving the generation and utilization of power Wireless Sensor Network WSN is efficiently utilized by wide ranging Smart Grid SG applications Despite many advantages WSN faces a challenge of avoiding interference experiencing from other coexisting wireless technologies working in the 2.4GHz unlicensed frequency band Providing support for WSN in terms of avoiding interference is a very challenging issue due to the dynamic wireless communication environment and extremely limited resources In the present thesis the problem of interference experienced by WSN in 2.4GHz has been investigated The challenges limitations and requirements for avoiding the interference for WSN working in the vicinity of other technologies like WiFi and Bluetooth have been identified As a result of the literature survey carried out it was identified that proper channel selection and channel prioritization for WSNs working in the coexisting environment had not been adequately developed till then Hence there was a requirement for addressing these issues The proposed schemes in this thesis are based on simulation results obtained

Energy Policies of IEA Countries Organization for Economic Cooperation and Development,2012 The Slovak Republic imports virtually all of its natural gas and crude oil from a single supplier the Russian Federation Energy security is therefore an overarching concern and priority in the Slovak Republic's energy policy agenda The government is taking steps to diversify supplies and build on lessons learned from the gas supply disruption in 2009 Enhancing regional co operation particularly in the development of gas and electricity interconnections is an essential step towards meeting the dual policy objectives of enhancing energy security and market competition The Slovak Republic has moved forward with coupling its electricity market with the Czech Republic's and supports the construction of a North-South pipeline connection that would link

planned LNG terminals in Croatia and Poland including an interconnector to Hungary Despite a sharp decline in greenhouse gas GHG emissions since 1990 the Slovak Republic remains a GHG intensive economy by OECD standards with energy related CO₂ emissions accounting for over 70% of total GHG emissions The country must continue to implement policies that ease the transition to a low carbon economy Nuclear power and renewable energy can play crucial roles in the Slovak Republic s efforts to decarbonise its electricity production Significant efforts can also be made to improve energy efficiency especially in the transport and building sectors District heating is a notable area with huge potential for reducing national GHG emissions This review analyses the energy policy challenges currently facing the Slovak Republic and provides sectoral studies and recommendations for further policy improvements It is intended to help guide the country towards a more secure and sustainable energy future
