Community Wellbeing at Toronto Metropolitan University      Using Computers in Qualitative Research Nigel G. Fielding  
 Raymond M. Lee, 1991-04-30 This is a comprehensive assessment of recent developments in the use of computers in qualitative research an increasingly important and rapidly growing area of interest among social scientists and graduate students Using Computers in Qualitative Research profiles and compares the principal programs available identifying their particular strengths and limitations It outlines the sorts of research problems that existing and forthcoming software can and cannot handle The contributors also draw on their experiences of teaching computer based techniques to suggest ways in which these could be incorporated into research methods training Reprinted with updated information on computer resources 1992      **Cross-National Research Methodology and Practice** Linda Hantrais, Steen Manger, 2013-09-13 Cross National Research Methodology and Practice offers practical guidance for relative newcomers to cross national research by analysing and evaluating the research process by focusing strongly on best practice in terms of methods and management It raises a number of important issues for cross national research which have been given insufficient attention in discussions of methods and practice The volume contains reflexive and theoretically based pieces on the development of contextualization as an approach to cross national comparative research on qualitative and quantitative methods extending to the integration of different methodological approaches The volume includes practical examples of cross national research projects which illustrate different methods ranging from biographical and documentary approaches the collection and analysis of socio demographic and attitudinal survey data either carried out by lone researchers or teams of researchers the exploration of internet sources and application of computer analysis to quantitative and qualitative data This collection provides a firm emphasis on methodological issues relating to context values and discourse      **Stenographer and Phonographic World**, 1901      **Economic Methodology and Freedom to Choose** Patrick O'Sullivan, 2012-03-22 First published in 1987 Professor O Sullivan s work provides an in depth philosophical examination of the foundations of method in Economics and other human sciences The argument is unabashedly dialectical in the great Socratic Platonic tradition and the reissue will be very welcome to all students of methodology in particular those students of economic methodology seeking a refreshing alternative to yet more mathematical game playing In an age dominated and perhaps to an extent perplexed by an ultimately non committal postmodernism the book provides a root and branch critique of the epistemological relativism which must lie at the root of the whole post modernist approach and in reasserting the fundamental importance not only for the methods of science but also for European civilisation of the pursuit of truth it takes a stance which is very much against the tide of the times A heterodox perspective is also provided and defended in detail regarding the real nature of economic methodology whereby it is shown that Economics epitomises a teleological mode of explanation which is significantly different from the efficient causal modes of explanation of the natural sciences In fact Economics is the ultimate subjectivist interpretative discipline in the methodological sense of Max Weber and Alfred Schutz a fact which has only been recognised and welcomed
