Acid In The Environment Lessons Learned And Future Prospects:

Acid in the Environment Gerald R. Visgilio, Diana M. Whitelaw, 2007-04-13 The Goodwin Niering Center for Conservation Biology and Environmental Studies at Connecticut College is a comprehensive interdisciplinary program that builds on one of the nation's leading undergraduate environmental studies programs. The Center fosters research education and curriculum development aimed at understanding contemporary ecological challenges. One of the major goals of the Goodwin Niering Center involves enhancing the understanding of both the College community and the general public with respect to ecological, political, social, and economic factors that affect natural resource use. To this end, the Center has offered five conferences at which academicians, representatives of federal and state government, and individuals from non-government environmental organizations are brought together for an in-depth interdisciplinary evaluation of important environmental issues. On April 1 and 2, 2005, the Center presented the Elizabeth Babbott Conant interdisciplinary conference on Acid in the Environment: Lessons Learned and Future Prospects. The Connecticut Institute of Water Resources at the University of Connecticut, the Connecticut Chapter of The Nature Conservancy, and the Connecticut Sea Grant College Program joined the Center as conference sponsors. During the past twenty-five years, acid rain, formally referred to as acid deposition, has been the focus of much political debate and scholarly research. Acid deposition occurs when important precursor pollutants such as sulfur dioxide (SO₂) and nitrogen oxides (NO_x) mix with water vapor and oxidants in the atmosphere and fall back to earth in either wet or dry form.

Beyond Resource Wars Shlomi Dinar, 2011 An argument that resource scarcity and environmental degradation can provide an impetus for cooperation among countries.

Saving Biological Diversity Robert A. Askins, Glenn D. Dreyer, Gerald R. Visgilio, Diana M. Whitelaw, 2008-09-22 The Goodwin Niering Center for Conservation Biology and Environmental Studies at Connecticut College is a comprehensive interdisciplinary program that builds on one of the nation's leading undergraduate environmental studies programs. The Center fosters research education and curriculum development aimed at understanding contemporary ecological challenges. One of the major goals of the Goodwin Niering Center is to enhance the understanding of both the College community and the general public with respect to ecological, political, social, and economic factors that affect natural resource use and preservation of natural ecosystems. To this end, the Center has offered six conferences at which academicians, representatives of federal and state government, people who depend on natural resources for their living, and individuals from non-government environmental organizations were brought together for an in-depth interdisciplinary evaluation of important environmental issues. On April 6 and 7, 2007, the Center presented the Elizabeth Babbott Conant interdisciplinary conference on Saving Biological Diversity: Weighing the Protection of Endangered Species vs. Entire Ecosystems. The Beaver Brook Foundation, Audubon Connecticut, the state office of the National Audubon Society, the Connecticut Chapter of The Nature Conservancy, Connecticut Forest and Park Association, and the Connecticut Sea Grant College Program joined the Center as conference sponsors. During this two

day conference we learned about conservation and endangered species from a wider range of perspectives. Like all of the conferences sponsored by the Goodwin Niering Center, this conference was broadly interdisciplinary with presentations by economists, political scientists, and conservation biologists. American Environmental Policy Daniel Press, 2015-02-27. More than 40 years after the United States launched bold efforts to curb pollution and waste, American environmental management has stalled. Drawing extensively on recent environmental science, engineering, regulatory agency data, and trade information

This allows readers to see the overall picture at a glance and find answers to the core questions: What is the pollution problem and what are its sources? What is the big picture or what background knowledge do we need? How can we diagnose the problem both qualitatively and quantitatively using monitoring and ecological models, indicators, and services? How can we solve the problem with environmental technology, ecotechnology, cleaner technology, and environmental legislation? How do we address the problem as part of an integrated management strategy? This accessible encyclopedia examines the entire spectrum of tools available for environmental management. An indispensable resource, it guides environmental managers to find the best possible solutions to the myriad pollution problems they face. Also Available Online. This is the third state and outlook report on the European environment produced by the European Environment Agency EEA since 1994. The last report published in 1999 concluded that despite 25 years of Community environmental policy environmental quality in the European Union EU was mixed and that the unsustainable development of some key economic sectors was the major barrier to further improvements. That remains the EEA's key conclusion despite significant progress on some issues demonstrating that environmental policy works. The next report is due in 2010 and the EEA intends to have played its part in reversing unsustainable trends in sectors such as energy agriculture and transport. This report is in four parts: A an integrated assessment of the atmospheric aquatic and terrestrial environment; B a core set of indicators including pollution biodiversity climate change agriculture energy fisheries and transport; C country analysis; and D a bibliography of EEA publications since 2000.

Bioregional Assessments K. Norman Johnson, 1999. In diverse regions around the country impending crises over dwindling natural resources and conflicts over land use have given birth to a new approach to environmental management and policymaking. Known as bioregional assessment, the approach gives science and scientists a crucial role in the policymaking process, bringing together experts on a range of issues to assess existing ecological and social conditions and to provide a base of knowledge from which to develop policy options and management decisions. A number of high profile assessments have been conducted and while much has been written on individual projects little has been done to compare assessments or integrate the lessons they provide. *Bioregional Assessments* synthesizes the knowledge from many regions by examining the assessment process and detailing a series of case studies from around the country. Each case study, written by knowledgeable leaders from the region, features a detailed description of the project followed by reviews from the perspectives of science management and policy. Case studies examined are the Forest Ecosystem Management Assessment Team FEMAT Assessment, the Great Lakes St Lawrence River Basin Assessments, the Everglades South Florida Assessments, the Northern Forest Lands Assessments, Southern California Natural Community Conservation Planning NCCP, the Interior Columbia Basin Ecosystem Management Project, and the Sierra Nevada Ecosystem Project. In addition, the book features introductory chapters that examine the challenges inherent in the assessment of complex regional systems and the role of science in the assessment process. The concluding chapter provides a synthesis and analysis of the assessment process. Bioregional assessments are quickly becoming an essential part of ecosystem management. This book provides a unique look at the theory and practice of bioregional assessments and is an essential volume for resource managers, scientists, policymakers, and anyone involved with formulating or implementing strategies for regional planning and ecosystem management.
