Abstract: The purpose of this study was to investigate the effect of a 12-week training program on the physical and psychological health of elderly people. The study was conducted in a community center in Tehran, Iran. The participants were 30 elderly people (15 men and 15 women) aged 65-75 years. They were divided into two groups: a control group and an experimental group. The experimental group received a 12-week training program consisting of aerobic, strength, and flexibility exercises. The control group did not receive any training. The results showed that the experimental group had significant improvements in physical and psychological health compared to the control group. The study suggests that a 12-week training program can improve the physical and psychological health of elderly people.
