Patankar, James C. Taylor, 2017-03-02 Although several US and European airlines have started providing human factors training to their maintenance personnel the academic community some 300 academic programs in the United States and several others in Europe and Asia has not yet started offering formal human factors education to maintenance students. The highly respected authors strongly believe in incorporating the human factors principles in aviation maintenance. This is the first of two volumes providing effective behavioural guidance on risk management in aviation maintenance for both the novice and the experienced maintenance personnel. Its practical guidelines assist both student and practising aviation maintenance personnel to develop sustainable safety culture. For the maintenance community it provides some theoretical discussion about the Why for risk management and then focus on the How to implement a successful error reduction program. To help the maintenance community in making a strong case to their financial managers the authors also discuss the return on investment for risk management programs. The issue of risk management is taken at two levels. First it provides a basic awareness information to those who have little or no knowledge of maintenance human factors. Second it provides a set of practical tools for the more experienced people so that they can be more effective in risk management and error recovery in their jobs. This invaluable book serves as a practical guide as well as an academic textbook. The book covers fundamental human factors principles from a risk management perspective. Upon reading this informative book the audience will be able to apply the basic principles of risk management to aviation maintenance environment and they will be able to use low risk behaviours in their daily work.

Airline Operations Peter J. Bruce, Yi Gao, John M. C. King, 2017-11-15

Written by a range of international industry practitioners, this book offers a comprehensive overview of the essence and nature of airline operations in terms of an operational and regulatory framework, the myriad of planning activities leading up to the current day and the nature of intense activity that typifies both normal and disrupted airline operations. The first part outlines the importance of the regulatory framework underpinning airline operations, exploring how airlines structure themselves in terms of network and business model. The second part draws attention to the operational environment, explaining the framework of the air traffic system and processes instigated by operational departments within airlines. The third part presents a comprehensive breakdown of the activities that occur on the actual operating day. The fourth part provides an eye opener into events that typically go wrong on the operating day and then the means by which airlines try to mitigate these problems. Finally, a glimpse is provided of future systems, processes and technologies likely to be significant in airline operations.

Airline Operations: A Practical Guide offers valuable knowledge to industry and academia alike by providing readers with a well informed and interesting dialogue on critical functions that occur every day within airlines.

Automation and Human Performance Raja Parasuraman, Mustapha Mouloua, 2018-01-29

There is perhaps no facet of modern society where the influence of computer automation has not been felt. Flight management systems for pilots, diagnostic and surgical aids for physicians, navigational displays for drivers and decision aiding systems for air traffic controllers represent only a few of the numerous domains in which powerful new automation technologies have been introduced. The benefits that have been reaped from this technological revolution have been many. At the same time, automation has not always worked as planned by designers and many problems have arisen from minor inefficiencies of operation to large scale catastrophic accidents. Understanding how humans interact with automation is vital for the successful design of new automated systems that are both safe and efficient. The influence of automation technology on human performance has often been investigated in a fragmentary, isolated manner, with investigators conducting disconnected studies in different domains. There has been little contact between these endeavors.

although principles gleaned from one domain may have implications for another Also with a few exceptions the research has tended to be empirical and only theory driven In recent years however various groups of investigators have begun to examine human performance in automated systems in general and to develop theories of human interaction with automation technology This book presents the current theories and assesses the impact of automation on different aspects of human performance Both basic and applied research is presented to highlight the general principles of human computer interaction in several domains where automation technologies are widely implemented The major premise is that a broad based theory driven approach will have significant implications for the effective design of both current and future automation technologies This volume will be of considerable value to researchers in human **Aircraft Maintenance Management** ,1981

Applied Human Factors in Aviation Maintenance Manoj S. Patankar,James C. Taylor,2017-07-05 Considering the global awareness of human performance issues affecting maintenance personnel there is enough evidence in the US ASRS reports to establish that systemic problems such as impractical maintenance procedures inadequate training and the safety versus profit challenge continue to contribute toward latent failures Manoj S Patankar and James C Taylor strongly believe in incorporating the human factors principles in aviation maintenance In this their second of two volumes they place particular emphasis on applying human factors principles in a book intended to serve as a practical guide as well as an academic text Features include A real how to approach that serves as a companion to the previous volume Risk Management and Error Reduction in Aviation Maintenance Self reports of maintenance errors used throughout to illustrate the systemic susceptibility for errors as well as to discuss corresponding solutions Two tools a pre task scorecard and a post task scorecard introduced as means to measure individual as well as organizational safety performance Interpersonal trust and professionalism explored in detail Ethical and procedural issues associated with collection and analysis of both qualitative as well as quantitative safety data discussed The intended readership includes aviation maintenance personnel e g FAA type aircraft mechanics CAA type aircraft maintenance engineers maintenance managers regulators and aviation students
