

Introduction to Microsoft Axapta Exercise

Objectives: The students should learn how to:

- Create new items in the system
- Create BOM (bills of material) for the created item
- Connect the new item and the BOM together

Case: Your department has received from the management that a new item in the company catalogue needs to be added. The item is valve, and consists of parts which need to be added as well.

1. Creating new Item

In order to create a new Item, you should go to Stock management -> Items database, and click CTRL + N. Enter the needed information for the item such as item number, item name, and specify if it is item or BOM (if you are adding the valve, then keep in mind it consists of different items).

Mandatory values that needs to be setup:

- Item group – found under Overview tab, when creating the new item
- Item type – found under Overview tab, when creating the new item. If you mistake it, you should go to Functions -> Change Item Type to change the item type
- Stock model group – found under General tab
- Dimension group – found under General tab

Also note that you need to set the quantity unit – if the item is stocked in pieces, meters, cubic centimeters, etc. This can be done from **Quantity tab**. Please note that all three columns have to be in the same dimension unit.

IMPORTANT! *There is difference between BOM and Item – items, which are described in the BOM, are used to assemble an assembly. The BOM contains specific information ONLY regarding the number and type of items needed to assemble a specific assembly, not how they are used in the production. Also BOM is produced by the company and the items are purchased.*

2. Creating new BOM and connecting it to a specific item

Creating new BOM connected to an item can be done after selecting the BOM item (for this case study, our VALVE), then selecting Lines, as shown on the picture below:

The book addresses this need and also provides MBS resellers a prospecting tool and training guide. Sales of the author's Navision book provide a leading indicator of sales volume. *Managing Your Supply Chain Using Microsoft Axapta* provides a simple yet comprehensive explanation of how to use Microsoft Axapta in small to midsize firms involved in manufacturing and distribution.

Business Process Automation August-Wilhelm Scheer, Ferri Abolhassan, Wolfram Jost, Mathias Kirchmer, 2012-11-07 Enterprises have to adapt their business processes quickly and efficiently to new business environments to ensure business success and long-term survival. It is not sufficient to apply best business practices; but new practices have to be developed and executed. These requirements are met by new business process automation technologies based on concepts like web services, EAI, workflow, enterprise service architectures, and automation engines. Business process automation becomes a key enabler for business process excellence. This book explains major trends in business process automation and shows how new technologies and solutions are applied in practice. It outlines how process automation becomes an element of an overall process lifecycle management approach structured on the basis of the ARIS House of business excellence and implemented through software tools like the ARIS toolset.

Security and Protection in Information Processing Systems Yves Deswarte, Frederic Cuppens, Sushil Jajodia, Lingyu Wang, 2006-04-11 Security is probably the most critical factor for the development of the Information Society. E-government, e-commerce, e-healthcare, and all other activities present challenging security requirements that cannot be satisfied with current technology except maybe if the citizens accept to waive their privacy, which is unacceptable ethically and socially. New progress is needed in security and privacy-preserving technologies. On these foundations, the IFIP SEC conference has been established from the eighties as one of the most important forums for presenting new scientific research results as well as best professional practice to improve the security of information systems. This balance between future technology improvements and day-to-day security management has contributed to better understanding between researchers, solution providers, and practitioners, making this forum lively and fruitful. *Security and Protection in Information Processing Systems* contains the papers selected for presentation at the 19th IFIP International Conference on Information Security SEC2004, which was held in August 2004 as a
