### Principles: Questions

The questions in this section test your knowledge of the major principles of biology. You will be asked to demonstrate your ability to apply these principles to the analysis of biological systems. Using your general knowledge, you will be asked to explain the biology of the biological systems you have studied and to interpret the results of biological experiments. You will also be asked to evaluate the results of biological experiments and to draw conclusions based on the results of these experiments.

You are required to answer three questions from the following group. You may answer any three questions in any order. You may not answer more than three questions. You may not answer the same question in more than one of the three groups. You may not answer more than one question in a group.

Group I: Questions 1, 2, and 3

1. **Cellular Respiration** In a series of experiments, a student studied the effect of different concentrations of oxygen on the rate of cellular respiration in yeast. The student used a yeast culture and a yeast culture that had been starved for glucose. The student measured the rate of cellular respiration by measuring the amount of carbon dioxide produced by the yeast culture over a period of time.

*The Publishers Weekly*, 1910 **Developing and Validating Test Items** Thomas M. Haladyna, Michael C. Rodriguez, 2013-07-18 Since test items are the building blocks of any test learning how to develop and validate test items has always been critical to the teaching learning process As they grow in importance and use testing programs increasingly supplement the use of selected response multiple choice items with constructed response formats This trend is expected to continue As a result a new item writing book is needed one that provides comprehensive coverage of both types of items and of the validity theory underlying them This book is an outgrowth of the author's previous book *Developing and Validating Multiple Choice Test Items* 3e Haladyna 2004 That book achieved distinction as the leading source of guidance on creating and validating selected response test items Like its predecessor the content of this new book is based on both an extensive

review of the literature and on its author's long experience in the testing field. It is very timely in this era of burgeoning testing programs especially when these items are delivered in a computer based environment. Key features include Comprehensive and Flexible. No other book so thoroughly covers the field of test item development and its various applications. Focus on Validity. Validity the most important consideration in testing is stressed throughout and is based on the Standards for Educational and Psychological Testing currently under revision by AERA APA and NCME. Illustrative Examples. The book presents various selected and constructed response formats and uses many examples to illustrate correct and incorrect ways of writing items. Strategies for training item writers and developing large numbers of items using algorithms and other item generating methods are also presented. Based on Theory and Research. A comprehensive review and synthesis of existing research runs throughout the book and complements the expertise of its authors.
