Automating the Design of Data Mining Algorithms Gisele L. Pappa,Alex Freitas,2009-10-27 Data mining is a very active research area with many successful real world applications It consists of a set of concepts and methods used to extract interesting or useful knowledge or patterns from real world datasets providing valuable support for decision making in industry business government and science Although there are already many types of data mining algorithms available in the literature it is still difficult for users to choose the best possible data mining algorithm for their particular data mining problem In addition data mining algorithms have been manually designed therefore they incorporate human biases and preferences This book proposes a new approach to the design of data mining algorithms instead of relying on the slow and ad hoc process of manual algorithm design this book proposes systematically automating the design of data mining algorithms with an evolutionary computation approach More precisely we propose a genetic programming system a type of evolutionary computation method that evolves computer programs to automate the design of rule induction algorithms a type of classification method that discovers a set of classification rules from data We focus on genetic programming in this book because it is the paradigmatic type of machine learning method for automating the generation of programs and because it has the advantage of performing a global search in the space of candidate solutions data mining algorithms in our case but in principle other types of search methods for this task could be investigated in the future

Introduction to the Design and Analysis of Algorithms Anany Levitin,2003 Based on a new classification of algorithm design techniques and a clear delineation of analysis methods Introduction to the Design and Analysis of Algorithms presents the subject in a truly innovative manner Written in a student friendly style the book encourages broad problem solving skills while thoroughly covering the material required in an introductory algorithms course The author emphasizes conceptual understanding before the introduction of the formal treatment of each technique

Popular puzzles are used to motivate students interest and strengthen their skills in algorithmic problem solving Other learning enhancement features include chapter summaries hints to the exercises and a solution manual

Success in Your Project Philip L. Weaver,2004 This text offers detailed guidance and support for students in preparing for conducting and evaluating a system development project It also covers projects ranging in scope from feasibility studies and software prototype development to projects covering the entire system development life cycle
