**Algorithms in SNOBOL4** James F. Gimpel, 1976     *Algorithms in SNOBOL4* James F. Gimpel, 1976 Explains computer programming applications and techniques using SNOBOL4 algorithms     History of Programming Languages Richard L. Wexelblat, 2014-05-27 History of Programming Languages presents information pertinent to the technical aspects of the language design and creation This book provides an understanding of the processes of language design as related to the environment in which languages are developed and the knowledge base available to the originators Organized into 14 sections encompassing 77 chapters this book begins with an overview of the programming techniques to use to help the system produce efficient programs This text then discusses how to use parentheses to help the system identify identical subexpressions within an expression and thereby eliminate their duplicate calculation Other chapters consider FORTRAN programming techniques needed to produce optimum object programs This book discusses as well the developments leading to ALGOL 60 The final chapter presents the biography of Adin D Falkoff This book is a valuable resource for graduate students practitioners historians statisticians mathematicians programmers as well as computer scientists and specialists

*Encyclopedia of Computer Science and Technology* Jack Belzer, Albert G. Holzman, Allen Kent, 1979-10-01 This comprehensive reference work provides immediate fingertip access to state of the art technology in nearly 700 self contained articles written by over 900 international authorities Each article in the Encyclopedia features current developments and trends in computers software vendors and applications extensive bibliographies of leading figures in the field such as Samuel Alexander John von Neumann and Norbert Wiener and in depth analysis of future directions     **Encyclopedia of**

**Microcomputers** Allen Kent, James G. Williams, 1994-10-27 The Encyclopedia of Microcomputers serves as the ideal companion reference to the popular Encyclopedia of Computer Science and Technology Now in its 10th year of publication this timely reference work details the broad spectrum of microcomputer technology including microcomputer history explains and illustrates the use of microcomputers throughout academe business government and society in general and assesses the future impact of this rapidly changing technology     **Computer Programming for the Humanities in**

**SNOBOL4** Eric Matthew Johnson, 1995     **A SNOBOL4 Primer** Ralph E. Griswold, Madge T. Griswold, 1973     **Medieval Studies and the Computer** Anne Gilmour-Bryson, 2014-05-19 Medieval Studies and the Computer focuses on the use of computers in medieval studies and humanities research Topics covered range from encoding and concordancing texts to the use of conceptual glossaries by medievalists as well as the use of computers for compiling Middle English lexicography and the Wisconsin Dictionary of the Old Spanish Language A computer analysis of metrical patterns in the epic Beowulf and of Notker Labeo's Old High German is also presented Comprised of 26 chapters this volume begins by discussing contexts in concordances and the set of conventions employed in text encoding The reader is then introduced to the series of initiatives undertaken in Belgium to study Latin literature and linguistics the use of conceptual glossaries by medieval scholars and the

use of the computer to make a word list of the Decretum Gratiani and to study Geoffrey Chaucer's vocabulary. Subsequent chapters discuss a computer program called KLIC (Key Letter In Context) for graphological analysis; a set of routines written in SAIL (Stanford Artificial Intelligence Language) for use by social historians in quantitative analysis or text processing; and the use of Mark IV, a general purpose file management system to analyze medieval charters. This book will be of interest to medievalists, social historians, students and scholars of humanities and computer scientists.

**Snobol Programming for the Humanities** Susan M. Hockey, 1985. This book is an introduction to computer programming for non scientific applications using SNOBOL, a computer language that runs on both mainframe and microcomputers and is particularly suitable for use in the humanities. Eight chapters cover all relevant aspects of SNOBOL and each contains example programs and a set of exercises. Chapter 9 introduces SPITBOL, a commonly used superset of SNOBOL. The book ends with some hints on how to detect errors in the language and some suggested applications for SNOBOL on microcomputers as well as mainframes. Developed from a programming course given by the author at Oxford, this book should appeal to researchers in the humanities as well as to students.

**The Humanities Computing Yearbook 1989-1990** Ian Lancashire, 1991. This is the second in a series of comprehensive annual reference guides to the use of computers in all the disciplines of the humanities. Like its predecessor, this volume provides a taxonomy of the field and an annotated survey of publications, research centers, text archives and termbanks, electronic communications software and hardware relevant to the humanities. It also includes special larger entries for important software that offer up to date information and practical help in applying that information to research projects and instruction in colleges and universities. For the 1989-1990 edition, Lancashire has for the first time appointed an international advisory board of specialists to assist in discovering, assembling and evaluating materials for inclusion and to keep up with the rapidly developing nature of the field and its international constituency. Lancashire has included many completely new or revised sections, including a major new chapter on computing in Law. A monumental work of current and enduring value. The Humanities Computing Yearbook will prove invaluable to a wide range of students, teachers and researchers in humanities and social sciences, computational linguistics and related fields in computer science.
