Appendix – G – Frequently Asked Questions- Application Object Library

General AOL

Where do concurrent request logfiles and output files go?

The concurrent manager first looks for the environment variable $APPLCSF
If this is set, it creates a path using two other environment variables:
$APPLLOG and $APPLOUT
It places log files in $APPLCSF/$APPLLOG
Output files go in $APPLCSF/$APPLOUT
So for example, if you have this environment set:

```
$APPLCSF = /u01/appl/common
$APPLLOG = log
$APPLOUT = out
```

The concurrent manager will place log files in /u01/appl/common/log, and
output files in /u01/appl/common/out
Note that $APPLCSF must be a full, absolute path, and the other two are
directory names
If $APPLCSF is not set, it places the files under the product top of the
application associated with the request.
So for example, a PO report would go under $PO_TOP/$APPLLOG and $PO_TOP/
$APPLOUT
Logfiles go to: /u01/appl/po/9.0/log
Output files to: /u01/appl/po/9.0/out
Of course, all these directories must exist and have the correct permissions.
Note that all concurrent requests produce a log file, but not necessarily
an output file.

What are the logfile and output file naming conventions?

Logfiles: l<request id>.req
Output files: If $APPCPNAM is not set: <username>.<request id>
    If $APPCPNAM = REQID: o<request id>.out
    If $APPCPNAM = USER: <username>.out

Where: <request id> = The request id of the concurrent request
And: <username> = The id of the user that submitted the request

How do I check if Multi-org is installed?

```
SELECT multi_org_flag FROM fnd_product_groups;
```

How do I find out what the currently installed release of Applications is?

```
SELECT release_name FROM fnd_product_groups
```

How do I find the name of a form?

GUI: Use Help->About Oracle Applications
    Scroll down to find the form name
Character: Use \Help->Version

How do I lookup ORA errors? (and TNS errors)

Use: oerr ora XXXX
or: oerr tns XXXX
where XXXX is the error number
(This also supports a number of other error types. Use the 3-letter error prefix in place
of "ora")
