

Chapter 14: Mendel and the Gene Idea

- 14.1 Explain Mendel's two laws of inheritance.
- 14.2 Describe the laws of probability and explain how they can be used to solve complex genetics problems.
- 14.3 Use examples to show how genetic inheritance patterns can be affected by complete dominance, incomplete dominance, codominance, multiple alleles, pleiotropy, epistasis, and polygenic inheritance.
- 14.4 Explain what a pedigree is and use examples to show how human traits follow Mendelian patterns of inheritance.

If you have completed a first-year high school biology course, some of this chapter will serve as a review for the basic concepts of Mendelian genetics. For other students, this may be your first exposure to genetics. In either case, this is a chapter that should be carefully mastered. Spending some time with this chapter, especially working genetics problems, will give you a solid foundation for the extensive genetics in the chapters to come.

Study Tip: There is no shortcut to understanding genetics. If you do numerous problems, it will soon make sense. We recommend that you print out p. 292 "Tips for Genetics Problems" and follow its suggestions. This part of your biology course is much like being in a math class, so plan to put pencil to paper and do lots of problems. Figure 14.1 in your chapter can be understood in light of what you learned in the last chapter on meiosis.

- a. Why does meiosis result in four haploid gametes?
- b. The offspring of purple and white-flowering plants all produce purple flowers, but still are able to form gametes for white-flowering offspring. What principle does this demonstrate?

Concept 14.1 Mendel used the scientific approach to identify two laws of inheritance

LO 14.1: Explain Mendel's two laws of inheritance.

- 1. What is the difference between a *character* and a *trait*? Explain using an example.
