Regression Analysis

INTRODUCTION

The APA provides guidelines for creating tables for many types of statistical analyses that can be performed using SAS. Space does not permit explaining how to produce tables for all types of analyses, and this paper focuses on one of the most common statistical methods, linear regression. The APA format for regression analysis results is shown in Figure 1 (Nichol 2010).

Figure 1. APA-style Table Layout for Regression Analysis Results

Although regression analysis can be performed using the REG, GLM, MIXED and GLIMMIX procedures, this paper focuses on creating the table in Figure 1 using PROC REG. You can create this table using word processing software such as Microsoft Word, but copying and pasting the result values from the REG procedure output to Microsoft Word is both laborious and prone to error. Instead, we programmatically create a table that closely matches the APA style and requires minimal editing.
