Now it becomes module 1 of the new part 2 exam. Is it tough? Well in a sense yes. It is tough because there is no fixed answer to the test questions. You are asked to choose the best possible answer among all potentially OK answers. Also most questions are long and with complicated scenarios to confuse you. To pick up the politically correct answers you have to use your business sense to make judgment on a case by case basis. SMR is all about supply side management at a higher global and strategic level. What is serious supply management all about? Accenture has developed seven principles of supply chain management:

- 1 Segment customers based on their service needs
- 2 Design the logistics network based on service requirements
- 3 Listen to the signals of market demand and plan accordingly
- 4 Differentiate products based on actual consumer demand
- 5 Strategically manage the sources of supply
- 6 Develop a supply chain wide technology strategy
- 7 Adopt measures that apply to every link in the supply chain.

Because of advances in manufacturing and distribution the cost of developing new products and services is dropping and time to market is speeding up. This has resulted in increasing customer demands local and global competition and increased pressure on the supply chain. To stay competitive companies must reinvent themselves so that the supply chain sourcing and procurement production scheduling order fulfillment inventory management and customer care is no longer a cost based back office exercise but rather a flexible operation designed to effectively address today's challenges. If you have been specializing in manufacturing or shop floor functions it is now the time to move yourself to a managerial position you need to see things from a broader MBA style perspective.

work Over the past twenty years the field of production and operations management has grown more rapidly than ever and consequently its boundaries have been stretched in all directions For example in the last two decades production and manufacturing management absorbed in rapid succession several new production management concepts manufacturing strategy focused factory just in time manufacturing concurrent engineering total quality management supply chain management flexible manufacturing systems lean production and mass customization to name a few This explosive growth makes the need for this volume abundantly clear The manufacturing industry thinks and acts more broadly than it did several decades ago The most notable change has been the need for manufacturing managers to think in technological strategic and competitive terms This is a very favorable development and it leads to manufacturing success The entries in this encyclopedia include the most recent technical and strategic innovations in production and manufacturing management The encyclopedia consists of articles of varying lengths The longer articles on important concepts and practices range from five to fifteen pages There are about 100 such articles written by nearly 100 authors from around the world In addition there are over 1000 shorter entries on concepts practices and principles The range of topics and depth of coverage is intended to suit both student and professional audiences The shorter entries provide digests of unfamiliar and complicated subjects Difficult subjects are made intelligible to the reader without oversimplification The strategic and technological perspectives on various topics give this Encyclopedia its distinctiveness and uniqueness The world of manufacturing today is increasingly competitive It is apparent that manufacturers must respond to these competitive pressures with technical and strategic innovation This encyclopedia has been developed to help researchers students and those in the manufacturing industry to understand and implement these ongoing changes in the field
