An Introduction to Quality Control for the Apparel Industry Pradip V. Mehta, 1985 *Cutting Room Management in Apparel Manufacturing* Dr. Prabir Jana, Mausmi Ambastha, 2020-01-01 Cutting Sewing Finishing is the common terminology used for the overall process that takes place in any organisation manufacturing garments via the industrial way. The cutting room or cutting department is the place where all the pre sewing activities like spreading cutting bundling ticketing fusing and embroidery are conducted before the cut components are sent to the sewing department. In a garment factory cutting department is pivotal from the point of view of controlling the material utilisation considering the fact that material constitutes 60% of the manufacturing cost. Although the labour cost component in spreading and cutting is very less in comparison to sewing the process involves material conversion which is irreversible and hence it is profoundly significant. Like any other department the technology used and the processes being followed are the two most important parameters of cutting room. This multi author book is an honest attempt on our part to cover all the cutting room processes in detail to unravel the relevance of material utilisation for garment manufacturing and thus provide an essential guide for cutting room managers and executives. These processes act as the tipping point for a garment factory where even a minor wastage or saving done in the fabric being used can have a major impact on the order margins. Besides they lay the foundation for the garments quality and hence become all the more important. Automation in Garment Manufacturing Rajkishore Nayak, Rajiv Padhye, 2017-11-10 Automation in Garment Manufacturing provides systematic and comprehensive insights into this multifaceted process. Chapters cover the role of automation in design and product development including color matching fabric inspection 3D body scanning computer aided design and prototyping. Part Two covers automation in garment production from handling spreading and cutting through to finishing and pressing techniques. Final chapters discuss

advanced tools for assessing productivity in manufacturing logistics and supply chain management This book is a key resource for all those engaged in textile and apparel development and production and is also ideal for academics engaged in research on textile science and technology Delivers theoretical and practical guidance on automated processes that benefit anyone developing or manufacturing textile products Offers a range of perspectives on manufacturing from an international team of authors Provides systematic and comprehensive coverage of the topic from fabric construction through product development to current and potential applications
