Fundamental Concepts of Algebra

Key Concepts

- Constants and Variables
- Matchstick Patterns
- Use of Variables
- Terms (Constant, Like, Unlike)
- Coefficient
- Algebraic Expressions
- Monomials, Binomial and Trinomial
- Polynomial

Algebra is a branch of Mathematics which uses numerals (0 to 9), signs of basic operations (+, −, × and ÷), letters of the English alphabet (a to z) and letters of the Greek alphabet (α, π, φ etc.) to represent some unknown terms or to generalize a result or pattern. Use of letters allows us to form rules and formulae in general.

Let's look at the following examples to understand how patterns are generalized.

(a) On her birthday, Sana wants to distribute 4 toffees to each student of her class.

For two students, she needs $4 \times 2 = 8$ toffees, whereas for three students she needs $4 \times 3 = 12$ toffees and so on. Clearly, the number of toffees increases as the number of students increases. We can see a pattern in the table given alongside and generalize it to find the subsequent terms as follows:

Number of toffees required = Number of toffees for each student $\times$ Number of students = $4n$, where n represents the number of students.

The expression $4n$ is the general expression for the number of toffees required when 4 toffees are given to each student.

(b) Consider the pattern,

$$1 + 3 = 4 = 2^2$$

$$1 + 3 + 5 = 9 = 3^2$$

$$1 + 3 + 5 + 7 = 16 = 4^2$$

⋮

So, sum of first n odd numbers = n^2

Constants and Variables

A quantity whose numerical value is fixed is known as a **constant** whereas a quantity whose numerical value changes is known as a **variable**. For example, 2, −5, $10\frac{3}{7}$, etc., are constants and x , y , z , $6a$, etc., are variables. Variables are also known as **literal numbers** or

Maths Info

The word algebra is derived from the title of the book 'Aljebar w'al almugabalah'.

Number of students	Number of toffees
1	$4 \times 1 = 4$
2	$4 \times 2 = 8$
3	$4 \times 3 = 12$
⋮	⋮

Maths Info

A combination of constants and variables is a variable.

CHEMISTRY STUDENT GUIDES GUIDED BY STUDENTS For any student who has ever struggled with a mathematical understanding of chemistry this book is for you Mathematics is the essential tool for physical scientists We know that confidence in using mathematics early on in a chemistry degree builds a solid foundation for further study However applying the abstract mathematics taught in schools to chemical phenomena is one of the biggest challenges that chemistry students face In this book we take a chemistry first approach We link the mathematics to recognisable chemical concepts building on high school chemistry to facilitate deeper understanding We cover the practical mathematical skills including representation of data as tables and graphs and give an overview of error handling in the physical sciences More advanced mathematical concepts are introduced using calculus to determine kinetic rate laws intermolecular forces and in quantifying energetic change in thermodynamics We also introduce the concept of the complex number and its role in considering quantum wave functions widely used in computational chemistry There are worked examples and problem sets to provide plenty of practise material to build proficiency We also include insights from real students which identify common problem areas and provide the prompts that helped them to overcome these Chemistry Student Guides are written with current students involved at every stage guiding the books towards the most challenging aspects of the topic **Resources in Education**, 1978 **The**
