14th International Conference on Turbochargers and Turbocharging Institution of Mechanical Engineers, 2020-09-30
14th International Conference on Turbochargers and Turbocharging addresses current and novel turbocharging system choices and components with a renewed emphasis to address the challenges posed by emission regulations and market trends The contributions focus on the development of air management solutions and waste heat recovery ideas to support thermal propulsion systems leading to high thermal efficiency and low exhaust emissions These can be in the form of internal combustion engines or other propulsion technologies eg Fuel cell in both direct drive and hybridised configuration 14th International Conference on Turbochargers and Turbocharging also provides a particular focus on turbochargers superchargers waste heat recovery turbines and related air managements components in both electrical and mechanical forms *Computational Methods in Multiphase Flow V* Andrea Alberto Mammoli, C. A. Brebbia, 2009 Together with turbulence multiphase flow remains one of the most challenging areas of computational mechanics and experimental methods and numerous problems remain unsolved to date Multiphase flows are found in all areas of technology at all length scales and flow regimes The fluids involved can be compressible or incompressible linear or nonlinear Because of the complexity of the problems it is often essential to utilize advanced computational and experimental methods to solve the complex equations that describe them Challenges in these simulations include modelling and tracking interfaces dealing with multiple length scales modelling nonlinear fluids treating drop breakup and coalescence characterizing phase structures and many others Experimental techniques although expensive and difficult to perform are essential to validate models This book contains papers presented at the Fifth International Conference on Computational Methods in Multiphase Flow which are grouped into the following topics Multiphase Flow Simulation Interaction of Gas Liquids and Solids Turbulent Flow Environmental Multiphase Flow Bubble and Drop Dynamics Flow in Porous Media Heat Transfer Image Processing Interfacial Behaviour **Advances of Computational Fluid Dynamics in Nuclear Reactor Design and Safety Assessment** Jyeshtharaj Joshi, Arun K. Nayak, 2019-06-09 *Advances of Computational Fluid Dynamics in Nuclear Reactor Design and Safety Assessment* presents the latest computational fluid dynamic technologies It includes an evaluation of safety systems for reactors using CFD and their design the modeling of Severe Accident Phenomena Using CFD Model Development for Two phase Flows and Applications for Sodium and Molten Salt Reactor Designs Editors Joshi and Nayak have an invaluable wealth of experience that enables them to comment on the development of CFD models the technologies currently in practice and the future of CFD in nuclear reactors Readers will find a thematic discussion on each aspect of CFD applications for the design and safety assessment of Gen II to Gen IV reactor concepts that will help them develop cost reduction strategies for nuclear power plants Presents a thematic and comprehensive discussion on each aspect of CFD applications for the design and safety assessment of nuclear reactors Provides an historical review of the development of

CFD models discusses state of the art concepts and takes an applied and analytic look toward the future Includes CFD tools and simulations to advise and guide the reader through enhancing cost effectiveness safety and performance optimization
