### **Suicidal behavior and depression among perinatal women: Research, Prevention, Intervention and Treatment**

Yari Gvion, Sami Hamdan, Vita Poštuvan, 2024-10-01 Suicide is a multifaceted phenomenon with numerous contributing and facilitating factors and variables. Despite motherhood serving as a potential protective factor against suicidal tendencies, a notable prevalence of suicidality persists among pregnant and postpartum women, making suicide a leading cause of death among women with postpartum depression (PDD). Furthermore, numerous women experience emotional challenges during pregnancy, which often persist into the postpartum phase, thus making them also susceptible to depression and suicidality. This Research Topic is dedicated to studies exploring various approaches to suicidal behavior, depression, as well as of non-suicidal self-injury (NSSI) among pregnant and postpartum women. The purpose of this Research Topic is to elucidate comprehensive analyses of extant knowledge and empirical data about models, theories, and specific dimensions and variables that may help us increase the understanding of suicidal phenomena among perinatal women, pregnant and postpartum. The specific goal is to identify characteristics that may be used to develop prevention and intervention methods among this at-risk population.
