operation for translunar injection The Saturn IB had a height of 141 6 feet and a mass of 1 3 million pounds without payload It produced thrust equivalent to 1 6 million pounds force and could carry 46 000 pounds of payload to low Earth orbit Saturn IB flew nine times including three Skylab missions and for the Apollo Soyuz Test Project Complete with many informative diagrams and photos this manual is a wonderful reference for the museum docent researcher or anyone who ever wondered how these mighty rockets were designed and built

Apollo by the Numbers Richard Orloff, Stephen Garber, 2007-12-15

The purpose of this work is to provide researchers students and space enthusiasts with a comprehensive reference for facts about Project Apollo America's effort to put humans in the Moon Research for this work started in 1988 when the author discovered that despite the number of excellent books that focused on the drama of events that highlighted Apollo there were none that focused on the drama of the numbers This book is separated into two parts The first part contains narratives for the Apollo 1 fire and the 11 flown Apollo missions Included after each narrative is a series of data tables followed by a comprehensive timeline of events from just before liftoff to just after crew and spacecraft recovery The second part contains more than 50 tables These tables organize much of the data from the narratives in one place so they can be compared among all missions The tables offer additional data as well The reader can select a specific mission narrative or specific data table by consulting the Table of Contents
