SKILL 1: Factors and Divisibility

Numbers that are multiplied are called **factors**. In $3 \times 8 = 24$, 3 and 8 are the factors. The product, 24, is divisible by each of its factors. When you divide a whole number by one of its factors, the remainder is 0.

To find the factors of a number, you can use divisibility rules. A divisibility rule is a shortcut for determining when one number is divisible by another.

A whole number is divisible by:

- 2** if the ones digit is 0, 2, 4, 6, or 8.
- 3** if the sum of the digits is divisible by 3.
- 5** if the ones digit is 0 or 5.
- 6** if the number is divisible by both 2 and 3.
- 10** if the ones digit is 0.

Example 1

Find the factors of 24.

List all the ways that you could multiply two numbers to get 24.

$$1 \times 24 = 24 \quad 2 \times 12 = 24 \quad 3 \times 8 = 24 \quad 4 \times 6 = 24$$

The factors of 24 are: 1, 2, 3, 4, 6, 8, 12, 24.

Example 2

By which of these numbers is 78 divisible: 2, 3, 5, 6, or 10?

The ones digit is 8. So, 78 is divisible by 2.

Since $7 + 8 = 15$, and 15 is divisible by 3, 78 is divisible by 3.

Because 78 is divisible by 2 and 3, it is divisible by 6.

The ones digit is not 0 or 5, so it is not divisible by 5 or by 10.

Guided Practice

Find the missing factors of 36.

3. $3 \times \underline{\hspace{2cm}} = 36$

4. $4 \times \underline{\hspace{2cm}} = 36$

5. $6 \times \underline{\hspace{2cm}} = 36$

6. The factors of 36 are: _____

Write yes or no to indicate if 1,260 is divisible by the given number.

7. 2 _____

Basic Math Skills Study Guide:

AGS Basic Math Skills August V. Treff, Donald H. Jacobs, American Guidance Service, 1997 *The PRAXIS I Math Study Guide Questions and the PRAXIS I Math Skills Test Questions: A Statistical Study* Mary Elaine Wilkins, 2012 In 2001 No Child Left Behind introduced the highly qualified status for K-12 teachers which mandated the successful scores on a series of high stakes test within this series is the Pre Professional Skills Test (PPST) or PRAXIS I. The PPST measures basic K-12 skills for reading, writing, and mathematics. The mathematics sub test is a national concern because some American high school students may graduate with basic math skills deficits that may prohibit their performance on the PPST. One approach to understanding this national concern is to explore the PPST preparation materials. This study focused on the numbers and operations, Algebra, Geometry, and measurement and data analysis and probability categories found within the study guide questions and test questions to statistically address the categorical reading ease and grade level means for the PPST study guide basic math skills questions and the PPST basic math skills test questions. The purpose of this study was to analyze the effectiveness of the PPST study guide questions when compared to the PPST basic math skills test questions. The math test was selected because on the reading, grammar, and math portions of the PPST basic skills test across demographic groups tested, the math score is reflective of lower scores earned. To enhance learning, it is hypothesized that study guide questions should be more complex than test questions are. This hypothesis is based upon low road transfer of knowledge and high road transfer of knowledge. Involving only ETS questions, the one-way ANOVA and Scheffe method examined this theory. The sample consisted of 320 questions; 200 questions were eliminated because of duplication and 10 questions were removed due to categorical contamination. One hundred and ten questions remained in the study. The statistical results revealed no significance differences between the study guide questions and the test questions for numbers and operations, Algebra, and Geometry and measurement. The data analysis and probability questions were eliminated. Statistical evidence supports the position that a low road knowledge of transfer exists between the PPST math study guide questions and the PPST basic math skills test questions.
