**Preface** The last four editions of Basic Skills in Interpreting Laboratory Data have been made possible by the dedicated chapter authors, reviewers, and the American Society of Health System Pharmacists publication division. It has been my honor to serve as the editor and to work with this team. For this sixth edition, approximately 90% of the lead authors have served in this capacity for the earlier editions of Basic Skills. However, Paul O. Gubbins, PharmD and Heather Lyons Burney, PharmD joined as the lead authors of a new chapter on Point of Care Testing, and Nicholas Moore, MS, MLS, ASCP updated the chapter on Laboratory Assays and Technology. All of the lead authors are established clinicians and/or experienced faculty at colleges of pharmacy; none are residents or pharmacy students. We think that this enhances the quality of the chapter content. A whole new group of reviewers have joined this project; many of them are board certified or established experts in their field. Their knowledge in their specialty areas of practice and their scrutiny of the chapter content has helped ensure that each chapter is up to date and that the content is relevant to clinical practice. As you use this book, you will find that the sixth edition includes updated chapter content with references; almost all of the chapters have at least one new case and sometimes more, and at least one new learning point. The glossary in the back of the book and the list of abbreviations in the front are expanded to enhance the convenience of using this book for the readers. A sampling of some significant and notable new content includes the following: Hematology: Blood Coagulation Tests expanded sections on laboratory tests to monitor direct thrombin inhibitors, direct oral anticoagulants, and low molecular weight heparin; Hematology: Red and White Blood Cell Tests discussion of cell types, associated clusters of differentiation epitopes or targets, and FDA approved targeted therapies; Infectious Diseases.
