

# What is Telecommunication?

- **Telecommunication**
  - ✓ Telecommunication occurs when the exchange of information between two entities (communication) includes the use of technology. Communication technology uses channels to transmit information (as electrical signals), either over a physical medium (such as signal cables), or in the form of electromagnetic waves.
- **Basic elements**
  - ✓ A **transmitter** that takes information (e.g. voice or text) and converts it to a signal.
  - ✓ A **transmission medium**, also called the "physical channel" that carries the signal. An example of this is the "free space channel, copper wire, coaxial cable or Fiber Optic cable, etc.".
  - ✓ A **receiver** that takes the signal from the channel and converts it back into usable information.
  - ✓ **Transceiver**: a single box of electronics working as both a transmitter and a receiver, or a transceiver. For example, a cellular phone is a transceiver.
- **Communication Channel**
  - ✓ The term "channel" has two different meanings. In one meaning, a channel is the **physical medium** that carries a signal between the transmitter and the receiver.
  - ✓ The other meaning of the term "channel" in telecommunications is seen in the phrase **communications channel**, which is a **subdivision of a transmission medium** so that it can be used to send multiple streams of information simultaneously.
