THE TRANSFER OF PROPERTY ACT, 1882: A COMPREHENSIVE GUIDE

Dr. Vandita Chahar, Somya Singh, 2025-09-20 The Transfer of Property Act 1882 is a foundational statute of Indian property law that governs the voluntary transfer of immovable property between living persons. This document provides a detailed analysis of the Act, tracing its roots from ancient Indian traditions and colonial codification to its present role in modern real estate and property transactions. It outlines the objectives of the Act such as codification of property laws, recognition of inter vivos transfers, establishment of uniformity, protection of rights, prevention of fraud, and encouragement of proper documentation. The scheme of the Act is explained through its eight chapters covering sales, mortgages, leases, exchanges, gifts, and actionable claims, supported by simplified section wise commentary and judicial interpretations. Landmark cases like K J Nathan v S V Maruthi Rao, Ram Karan v State of U P and Jumma Masjid v Kodimaniandra Deviah are discussed to illustrate how courts have shaped its application. The document also highlights amendments, criticisms, and contemporary challenges such as urbanization and digital land records while including MCQs and descriptive questions for academic use. Overall, it presents the Act as a living legal instrument that balances the rights of transferors and transferees while upholding the principles of justice, equity, and good conscience.

Federated Learning Mei Kobayashi, 2025-08-01 This book serves as a primer on a secure computing framework known as federated learning. Federated learning is the study of methods to enable multiple parties to collaboratively train machine learning AI models while each party retains its own raw data on-premise, never sharing it with others. This book is designed to be accessible to anyone with a background in undergraduate applied mathematics. It covers the basics of topics from computer science that are needed to understand examples of simple federated computing frameworks. It is my hope that by learning basic concepts and technical jargon from computer science, readers will be able to start collaborative work with researchers interested in secure computing. Chap 1 provides the background and motivation for data security and federated learning and the simplest type of neural network. Chap 2 introduces the idea of multiparty computation (MPC) and why enhancements are needed to provide security and privacy. Chap 3 discusses edge computing, a distributed computing model in which data processing takes place on local devices closer to where it is being generated. Advances in hardware and economies of scale have made it possible for edge computing devices to be embedded in everyday consumer products to process large volumes of data quickly and produce results in near real time. Chap 4 covers the basics of federated learning. Federated learning is a framework that enables multiple parties to collaboratively train AI models while each party retains control of its own raw data, never sharing it with others. Chap 5 discusses two attacks that target weaknesses of federated learning systems: 1) data leakage, i.e., inferring raw data used to train an AI model by unauthorized parties, and 2) data poisoning, i.e., a cyberattack that compromises data used to train an AI model to manipulate its output.

Locus of Authority William G. Bowen, Eugene M. Tobin, 2017-05-30 Locus of Authority argues that every issue facing today's colleges and universities from stagnant degree completion rates to worrisome cost increases is exacerbated by a century old system of governance that desperately requires change While prior studies have focused on boards of trustees and presidents few have looked at the place of faculty within the governance system Specifically addressing faculty roles in this structure William G Bowen and Eugene M Tobin ask do higher education institutions have what it takes to reform effectively from within Bowen and Tobin use case studies of four very different institutions the University of California Princeton University Macalester College and the City University of New York to demonstrate that college and university governance has capably adjusted to the necessities of the moment and that governance norms and policies should be assessed in the context of historical events The authors examine how faculty roles have evolved since colonial days to drive change but also to stand in the way of it Bowen and Tobin make the case that successful reform depends on the artful consideration of technological financial and cultural developments such as the explosion in online learning Stressing that they do not want to diminish faculty roles but to facilitate their most useful
