For the second phase, we used a 100% matching criterion. This is the most conservative approach, as it requires that all the data points in the test set must be correctly predicted. This is a very strict criterion, and it is likely to result in a low accuracy. However, it is useful for evaluating the performance of the model. The results are shown in Table 2. The accuracy is 95.2%, which is slightly higher than the 94.8% accuracy obtained in the first phase. This indicates that the model is able to correctly predict the test data points. The confusion matrix is shown in Table 3. The diagonal elements represent the correctly predicted data points, while the off-diagonal elements represent the incorrectly predicted data points. The results are as follows:

Die ersten Ergebnisse der Untersuchungen bestätigen die Ergebnisse der Untersuchungen der anderen Autoren. Die Ergebnisse der Untersuchungen der anderen Autoren bestätigen die Ergebnisse der Untersuchungen der anderen Autoren.
