Digital Literacies Mark Pegrum, Nicky Hockly, Gavin Dudeney, 2014-06-03 Dramatic shifts in our communication landscape have made it crucial for language teaching to go beyond print literacy and encompass the digital literacies which are increasingly central to learners' personal, social, educational and professional lives. By situating these digital literacies within a clear theoretical framework, this book provides educators and students alike with not just the background for a deeper understanding of these key 21st century skills but also the rationale for integrating these skills into classroom practice. This is the first methodology book to address not just why but also how to teach digital literacies in the English language classroom. This book provides a theoretical framework through which to categorise and prioritise digital literacies. Practical classroom activities to help learners and teachers develop digital literacies in tandem with key language skills. A thorough analysis of the pedagogical implications of developing digital literacies in teaching practice. A consideration of exactly how to integrate digital literacies into the English language syllabus. Suggestions for teachers on how to continue their own professional development through PLNs (Personal Learning Networks) and how to access teacher development opportunities online. This book is ideal for English language teachers and learners of all age groups and levels, academics and students researching digital literacies and anyone looking to expand their understanding of digital literacies within a teaching framework. **CeDEM11**, Recycling and Deinking of Recovered Paper Pratima Bajpai, 2024-06-26 Recycling and Deinking of Recovered Paper Second Edition covers recent advances in recycling technologies. This second edition examines this new process which is more eco friendly than the virgin papermaking process and which uses less energy and natural resources, produces less solid waste and fewer atmospheric emissions and helps to preserve natural resources and landfill space. In addition, the most recent information about the recycling of fibers into various grades of paper and board, the control of stickies and the effects of recycled fiber on paper machines are also covered. Recycling technologies have been improved in recent years due to advances in pulping, flotation, deinking and cleaning screening, resulting in the quality of paper made from secondary fibers remarkably approaching that of virgin paper. Covers all aspects of recycling technologies in great depth. Offers up to date authoritative information and cites many mills' experiences and pertinent research. Examines the use of biotech methods for deinking, refining, improving drainage and stickies control. Includes new case studies on paper recycling. **Universal Access in Human-Computer Interaction.
