

# BLOOD-SPATTER PATTERNS

Example: Gunshot blood spatter

Example: Stabbing blood spatter

Example: Blast object impact

## High Impact:

1. The sizes of the droplets are less than 1 mm
2. The velocity would be 100 ft/sec

## Medium Impact:

1. The sizes of the droplets are between 1 mm and 4 mm.
2. The velocity would be 25 ft/sec

## Low Impact:

1. The sizes of the droplets would be more than 4 mm.
2. The velocity would be 5 ft/sec

## Droplet Patterns:

This is 90 degrees with no direction

Spines: connect with the main blood droplet

Satellite: are small secondary droplets

This type is going from left to right coming forward.

Direction: blood is traveling; this gives clues to the direction where the blood came from.

For this example, this is coming from a down angle from right to left.

De Forest, Peter A. Pizzola, Brooke W. Kammrath, 2021-08-09 A guide to the scientific interpretation of blood traces. *Blood Traces* provides an authoritative resource that reviews many of the aspects of the interpretation of blood traces that have not been treated with the thoroughness they deserve. With strict adherence to the scientific method, the authors noted experts on the topic address the complexities encountered when interpreting blood trace configurations. The book provides an understanding of the scientific basis for the use of blood trace deposits i.e. bloodstain patterns at crime scenes to better reconstruct a criminal event. The authors define eight overarching principles for the comprehensive analysis and interpretation of blood trace configurations. Three of these principles are: blood traces may reveal a great deal of useful information, extensive blood traces although present may not always yield information relevant to questions that may arise in a given case and a collection of a few seemingly related dried blood droplet deposits is not

necessarily an interpretable pattern This important resource Provides the fundamental principles for the scientific examination and understanding of blood trace deposits and configurations Dispels commonly accepted misinformation about blood traces Contains a variety of illustrative case examples which will aid in demonstrating the concepts discussed Written for forensic scientists crime scene investigators members of the legal community and students in these fields Blood Traces presents the fundamental principles for the scientific examination of blood trace deposits and configurations

**Bloodstain Pattern Analysis** Sonya Ching-Ying Siu,2012 Bloodstain pattern analysis BPA provides significant evidentiary value in crime scene interpretation and reconstruction but many aspects of BPA are controversial due to the heavy reliance on qualitative and subjective interpretation For example the differentiation between so called medium and high velocity impact spatter patterns legacy terminology typically associated with blunt instrument and gunshot impacts respectively has traditionally relied on visual assessment of the average drop size in the pattern Because this methodology is subjective and susceptible to context bias most BPA organizations recommend against even attempting to describe the velocity that creates a spatter pattern despite the clear forensic value of such determinations in crime scene interpretation In this work we develop a quantitative methodology using digital image analysis techniques to differentiate medium and high

velocity impact spatter patterns in an objective manner. Bloodstain spatter patterns were created under controlled conditions by impacting either blunt instruments or bullets into blood soaked sponges. The impact velocities were determined using high speed video and the resulting spatter patterns were digitally imaged at high resolution then analyzed using custom image analysis algorithms. Our analysis of 72 unique spatter patterns comprising more than 490 000 individual droplets indicates that the mean drop size in a gunshot spatter pattern is at most 30% smaller than the mean drop size in blunt instrument patterns. In contrast we demonstrate that the spatially dependent size distribution of droplets i e drop sizes as a function of position in the pattern significantly differs between bullet and blunt instrument patterns with a spatially dependent metric as much as 400% larger for bullet impacts. Our findings suggest that quantitative metrics involving the spatial distribution of droplets within a spatter pattern can be useful for objective differentiation between blunt instrument and gunshot spatter patterns.

**Death Investigation** Terry L. Castleman, 2000. This book is a handbook and practical guide for police death investigators. The book is divided into two sections one for in depth reading and the other as a quick reference section. The book defines death and the role of the police death investigator and discusses the various aspects and causes of death. It covers identifying the victim, establishing time of death by post mortem changes, drowning, gunshot wounds, cutting, stabbing and blunt trauma, asphyxia by poisoning and other means, deaths due to fire, electrical and lightning, deaths from traffic crash related deaths, deaths due to cocaine, infant death, suicide, homicide and studies and experiments including use of computers to document information from the experiments and to create and manipulate databases. It includes data on crime scenes, use of such evidence as blood spatter and fly larvae and use of hypnosis and psychics in major case investigations. It also contains a comprehensive glossary and photographs from actual cases. The guiding theme of the handbook is that teamwork in death investigations is essential to achieve viable and effective solutions.
