Practical Guide to Blow Moulding N. C. Lee, Norman C. Lee, 2006 Blow moulding is a manufacturing process used to form hollow plastic parts It evolved from the ancient art of glass blowing and it is used to particular advantage with plastic materials Celluloid was used first to blow mould baby rattles and novelties in the 1930s linear low density polyethylene was used in the 1940s for high production bottles and these days polyethylene terephthalate is used to make anything from soda bottles to highly sophisticated multilayered containers and automotive fuel tanks in the last decade When designing a product it is important to consider aspects such as a material s characteristics the processing methods available the assembly and finishing procedures and the life cycle and expected performance of the product This book presents the basics of blow moulding as well as the latest state of the art and science of the industry A key feature is the approach of discussing the basics and then taking the reader through the entire process from design development through to final production

Plastic Conversion Processes Eric Cybulski, 2009-05-28 The explosion of plastic material development continues to generate a proliferation of conversion processes and variants of these methods Unfortunately most books on plastics conversion focus on a single process such as injection molding limiting their usefulness to readers without prior knowledge of the field Few if any single source texts

Plastic Blow Molding Handbook N.C. Lee, 1990-05-31 Over the years numerous handbooks and design guides on the subject of plastics have been published None of these dealt in any depth with the subject of this handbook blow molding The recent growth of blow molding as an economically feasible process has been rapid in many areas This growth coupled with the lack of technical publications relating to blow molding prompted the Board of Directors of the Blow Molding Division of the Society of Plastic Engineers to undertake the assimilation of available information and the editing of this milestone publication We believe that this Plastic Blow Molding Handbook will provide the reader with a greater understanding of the unique process characteristics of blow molding enable the reader to apply proven techniques in developing new products and applications for blow molding and will serve as a valuable reference for all who are interested in the plastics industry Our thanks are heartily extended to the various authors for their contributions to this pioneering effort in blow molding J H Moran Chairman Blow Molding Division Society of Plastic Engineers xi Preface The blow molding of plastic articles has in the past had an aura of the mystic around it As a result little comprehensive work on the subject has been published Advances in the technology of polymeric materials machine controls computer science and management techniques have made it necessary to correct the myths and magic

Plastics A. Brent Strong,2006 *Lawyers Desk Reference* ,2001 *DuBois and Pribble's Plastics Mold Engineering Handbook* Eric L. Buckleitner,1995-05-31 From day one of the concept of this book about 1941 our objective has been to make the clearest possible statements about the thinking processes which go into the good design of a mold Careful chosen illustrations show the rational process Recommendations are made to maximize the effectiveness Basically the design of a mold is only one third of the team effort in producing a particular plastic part The best molder in the world will be handicapped by a badly designed or a badly made mold The best mold maker in the world cannot make a good mold from a bad design The best design in the world will only be the best when the mold is well made and operated by a knowledgeable molder Being right the first time is or should be the prime objective of any mold designer In the 1930 s and 40 s it seemed every mold was an invention A 1500 ton compression press was a monster There were few design guidelines except the expertise of those toolmakers who had to use my designs Fortunately for me when a problem arose my immediate mentor simply said Wayne you designed it go take care of the problem The comments of those toolmakers were not always complimentary
