Air Conditioning Design Guide:

Air-conditioning System Design Manual Walter T. Grondzik, 2007 The Air Conditioning Manual assists entry level engineers in the design of air conditioning systems It is also usable in conjunction with fundamental HVAC R resource material as a senior or graduate level text for a university course in HVAC system design The manual was written to fill the void between theory and practice to bridge the gap between real world design practices and the theoretical calculations and analytical procedures or on the design of components This second edition represents an update and revision of the manual It now features the use of SI units throughout updated references and the editing of many illustrations Helps engineers quickly come up with a design solution to a required air conditioning system Includes issues from comfort to cooling load calculations New sections on Green HVAC systems deal with hot topic of sustainable buildings *HVAC Design Guide for Tall Commercial Buildings* Donald E. Ross, 2004 Tall commercial office buildings present a series of design problems that differ from those that are found in other projects in the built environment HVAC Design Guide for Tall Commercial Buildings provides guidance in both understanding the HVAC design problems of tall commercial office buildings and in detailing their alternative solutions Hotel HVAC Design Guide Charles Nehme, Hotels rely on efficient HVAC systems to ensure the comfort of their guests HVAC Heating Ventilation and Air Conditioning systems are used to control the temperature humidity and air quality of a hotel s interior environment By regulating a hotel s indoor environment HVAC systems help to create a more comfortable and healthy atmosphere for guests Hotels typically use a combination of heating and cooling systems to maintain the desired temperature in each room Heating systems like furnaces boilers and heat pumps are used to warm the air during colder months while cooling systems like air conditioners and evaporative coolers are used to cool the air in warmer months In addition ventilation systems are used to bring in fresh outdoor air and filter out airborne pollutants HVAC systems in hotels must be designed and maintained to meet the specific needs of the hotel Factors such as the size of the hotel the number of rooms and the climate of the local area all need to be taken into account when designing an HVAC system It is also important to ensure that the HVAC system is energy efficient as this can help reduce both energy costs and the hotel s environmental impact Hotels also rely on HVAC systems to filter out airborne pollutants such as dust pollen and other allergens Air filters and purifiers help to clean the air of these particles helping to reduce the risk of guests developing allergies or other respiratory illnesses Finally the HVAC system in a hotel plays an important role in controlling humidity levels Low humidity levels can cause guests to feel uncomfortable or even sick while high humidity levels can lead to mold and mildew growth By regulating humidity levels HVAC systems help to create a more comfortable and healthy environment for guests *Air Conditioning Systems Design Manual* Harold G. Lorsch, American Society of Heating, Refrigerating and Air-Conditioning Engineers, 1993 The ASHRAE 581 RP Project Team **HVAC Systems Design Handbook, Fifth Edition** Michael Myers, Roger Haines, 2009-10-09 A complete fully revised HVAC design reference Thoroughly updated with the latest

HVAC Guide to Air Handling System Design A. Bhatia, 2014-11-01 The term Air Handling System refers to the equipment where air is conditioned to an acceptable level for distribution within the building An air handling unit often abbreviated as AHU is a very important component of central air conditioning system It is responsible for drawing return air from the indoor spaces mixing it with outdoor air conditioning it to the acceptable level for distribution within the building The modular packaged equipment offered by various manufacturers is pretty standard HVAC designers can simply spec the performance requirements and pick and choose from a

wide array of standard building blocks to assemble a unit that meets their specific project needs But large majority of air handlers are custom built or tailor made demanding HVAC designer to apply fundament psychrometrics processes to precisely estimate the capacity and airflow requirements select the fan coil and other auxiliaries and integrate these properly to the building control system This 6 hr Quick Book outlines the key design considerations for sizing selecting and estimating the capacity and airflow rate of air handling systems At the conclusion of this quick book the reader will be able to answer What is function of Air handling unit and what factors affect its sizing How are air conditioning processes depicted on the psychrometric chart What is difference between room sensible and grand sensible heat factor How is airflow rate and the cooling coil load determined What are the five basic AHU arrangements What are the different types and applications of the fans used in air handling applications What are the different types of cooling and heating coils What are the different types and applications of the filters used in air handling applications What are the different types of humidifiers and dehumidifiers What are the different types of control valves and their application How are the air handling unit controlled and the sequence of operation for critical facility What are the energy conservation features in designing air handling systems

The Building Environment Vaughn Bradshaw, 2010-09-29 Get the updated guide to active and passive control systems for buildings To capitalize on today's rapidly evolving specialized technologies architects designers builders and contractors work together to plan the mechanical and electrical equipment that controls the indoor environment of a building The Building Environment Active and Passive Control Systems Third Edition helps you take advantage of design innovations and construction strategies that maximize the comfort safety and energy efficiency of buildings From active HVAC systems to passive methods lighting to on site power generation this updated edition explains how to strategically plan for and incorporate effective efficient systems in today's buildings It covers the underlying thermal theories and thermodynamic principles and focuses on design that enhances the building environment and minimizes the impact on the world's environment The Building Environment goes beyond the ABCs of HVAC and covers On site power generation including wind turbines solar photovoltaic cells fuel cells and more Plumbing systems fire protection signal systems conveying systems and architectural acoustics Procedures and or formulas for performing heat loss heat gain and energy use calculations determining the rate of heat flow calculating solar energy utilization doing load calculations and more Details on the latest building codes and standards references New information on the sustainable design of building systems and energy efficiency including new technologies The latest thinking and data on a building's impact on the environment indoor air quality and sick building syndrome Design economics including the payback period life cycle cost comparative value analysis and building commissioning A practical on the job tool for architects designers builders engineers contractors and other specialists this Third Edition is also a great reference for architecture students who will lead tomorrow's design teams
