1. Amphibians live in both water and on land. They have a life cycle that includes a stage where they live in water and a stage where they live on land.
2. Amphibians have moist, permeable skin. This skin allows them to breathe through their skin, but it also means they need to stay in moist environments.
3. Amphibians are cold-blooded. This means their body temperature changes with the environment. They need to bask in the sun to warm up and seek shade or water to cool down.
4. Amphibians have two pairs of lungs. They also have a special organ called a sac that helps them breathe underwater.
5. Amphibians have three eyes. They have two large eyes on the outside and a third eye in the middle of their forehead.
