Learning Analytics Methods and Tutorials Mohammed Saqr, Sonsoles López-Pernas, 2024-06-24 This open access comprehensive methodological book offers a much needed answer to the lack of resources and methodological guidance in learning analytics which has been a problem ever since the field started. The book covers all important quantitative topics in education at large as well as the latest in learning analytics and education data mining. The book also goes deeper into advanced methods that are at the forefront of novel methodological innovations. Authors of the book include world renowned learning analytics researchers, R package developers and methodological experts from diverse fields offering an unprecedented interdisciplinary reference on novel topics that is hard to find elsewhere. The book starts with the basics of R as a programming language, the basics of data cleaning, data manipulation, statistics and analytics. In doing so, the book is suitable for newcomers as they can find an easy entry to the field as well as being comprehensive of all the major methodologies. For every method, the corresponding chapter starts with the basics, explains the main concepts and reviews examples from the literature. Every chapter has a detailed explanation of the essential techniques and basic functions combined with code and a full tutorial of the analysis with open access real life data. A total of 22 chapters are included in the book covering a wide range of methods such as predictive learning, analytics network analysis, temporal networks, epistemic networks, sequence analysis, process mining, factor analysis, structural topic modeling, clustering, longitudinal analysis and Markov models. What is really unique about the book is that researchers can perform the most advanced analysis with the included code using the step by step tutorial and the included data without the need for any extra resources. This is an open access book.

Data Analytics for the Social Sciences G. David Garson, 2021-11-29 Data Analytics for the Social Sciences is an introductory graduate level treatment of data analytics for social science. It features applications in the R language, arguably the fastest growing and leading statistical tool for researchers. The book starts with an ethics chapter on the uses and potential abuses of data analytics. Chapters 2 and 3 show how to implement a broad range of statistical procedures in R. Chapters 4 and 5 deal with regression and classification trees and with random forests. Chapter 6 deals with machine learning models and the caret package which makes available to the researcher hundreds of models. Chapter 7 deals with neural network analysis and Chapter 8 deals with network analysis and visualization of network data. A final chapter treats text analysis including web scraping, comparative word frequency tables, word clouds, word maps, sentiment analysis, topic analysis and more. All empirical chapters have two Quick Start exercises designed to allow quick immersion in chapter topics followed by In Depth coverage. Data are available for all examples and runnable R code is provided in a Command Summary. An appendix provides an extended tutorial on R and RStudio. Almost 30 online supplements provide information for the complete book. Books within the book on a variety of topics such as agent based modeling. Rather than focusing on equations, derivations and proofs, this book emphasizes hands on obtaining of output for various social science models and how to

interpret the output It is suitable for all advanced level undergraduate and graduate students learning statistical data analysis
