Algebra And Its Applications Lecture Notes In Pure And Applied Mathematics:

Algebra and its Applications H. L. Manocha, J. B. Srivastava, 1984-05-31 This volume unites more than fifty international mathematicians spotlighting research that demonstrates the importance of algebra in science and engineering Areas in algebra such as invariant theory group representations commutative algebra and algebraic geometry are important factors in such subjects as quantum physics computing and data communications The International Symposium on Algebra and Its Applications was organized by the Department of Mathematics of the Indian Institute of Technology and held in New Delhi India December 21 25 1981 This volume contains papers presented and the editors wish to express their appreciation to all the authors for their submissions and symposium participants for their enthusiasm

Non-Associative Algebra and Its Applications Lev Sabinin, Larissa Sbitneva, Ivan Shestakov, 2006-01-13 With contributions derived from presentations at an international conference Non Associative Algebra and Its Applications explores a wide range of topics focusing on Lie algebras nonassociative rings and algebras quasigroups loops and related systems as well as applications of nonassociative algebra to geometry physics and natural sciences This book covers material such as Jordan superalgebras nonassociative deformations nonassociative generalization of Hopf algebras the structure of free algebras derivations of Lie algebras and the identities of Albert algebra It also includes applications of smooth quasigroups and loops to differential geometry and relativity

Multiplicative Ideal Theory and Factorization Theory Scott Chapman, Marco Fontana, Alfred Geroldinger, Bruce Olberding, 2016-07-29 This book consists of both expository and research articles solicited from speakers at the conference entitled Arithmetic and Ideal Theory of Rings and Semigroups held September 22 26 2014 at the University of Graz Graz Austria It reflects recent trends in multiplicative ideal theory and factorization theory and brings together for the first time in one volume both commutative and non commutative perspectives on these areas which have their roots in number theory commutative algebra and algebraic geometry Topics discussed include topological aspects in ring theory Pr fer domains of integer valued polynomials and their monadic submonoids and semigroup algebras It will be of interest to practitioners of mathematics and computer science and researchers in multiplicative ideal theory factorization theory number theory and algebraic geometry

Lecture Notes in Pure and Applied Mathematics , 1985

Commutative Algebra and Algebraic Geometry Sudhir Ghorpade, 2005 The first Joint AMS India Mathematics Meeting was held in Bangalore India This book presents articles written by speakers from a special session on commutative algebra and algebraic geometry Included are contributions from some leading researchers around the world in this subject area The volume contains new and original research papers and survey articles suitable for graduate students and researchers interested in commutative algebra and algebraic geometry

Diophantine Approximation on Linear Algebraic Groups Michel Waldschmidt, 2013-03-14 The theory of transcendental numbers is closely related to the study of diophantine approximation This book deals with values of the usual exponential function e^z a central open problem is the conjecture on algebraic independence of logarithms of

algebraic numbers Two chapters provide complete and simplified proofs of zero estimates due to Philippon on linear algebraic groups

Nonassociative Algebra and Its Applications Taylor & Francis Group, 2020-09-30 A collection of lectures presented at the Fourth International Conference on Nonassociative Algebra and its Applications held in Sao Paulo Brazil Topics in algebra theory include alternative Bernstein Jordan lie and Malcev algebras and superalgebras The volume presents applications to population genetics theory physics and more

Progress in Commutative Algebra 2 Christopher Francisco, Lee C. Klingler, Sean M. Sather-Wagstaff, Janet C. Vassilev, 2012-04-26 This is the second of two volumes of a state of the art survey article collection which originates from three commutative algebra sessions at the 2009 Fall Southeastern American Mathematical Society Meeting at Florida Atlantic University The articles reach into diverse areas of commutative algebra and build a bridge between Noetherian and non Noetherian commutative algebra These volumes present current trends in two of the most active areas of commutative algebra non noetherian rings factorization ideal theory integrality and noetherian rings the local theory graded situation and interactions with combinatorics and geometry This volume contains surveys on aspects of closure operations finiteness conditions and factorization Closure operations on ideals and modules are a bridge between noetherian and nonnoetherian commutative algebra It contains a nice guide to closure operations by Epstein but also contains an article on test ideals by Schwede and Tucker and one by Enescu which discusses the action of the Frobenius on finite dimensional vector spaces both of which are related to tight closure Finiteness properties of rings and modules or the lack of them come up in all aspects of commutative algebra However in the study of non noetherian rings it is much easier to find a ring having a finite number of prime ideals The editors have included papers by Boynton and Sather Wagstaff and by Watkins that discuss the relationship of rings with finite Krull dimension and their finite extensions Finiteness properties in commutative group rings are discussed in Glaz and Schwarz s paper And Olberding s selection presents us with constructions that produce rings whose integral closure in their field of fractions is not finitely generated The final three papers in this volume investigate factorization in a broad sense The first paper by Celikbas and Eubanks Turner discusses the partially ordered set of prime ideals of the projective line over the integers The editors have also included a paper on zero divisor graphs by Coykendall Sather Wagstaff Sheppardson and Spiroff The final paper by Chapman and Krause concerns non unique factorization

Monomial Ideals, Computations and Applications Anna M. Bigatti, Philippe Gimenez, Eduardo Sáenz-de-Cabezón, 2013-08-24 This work covers three important aspects of monomial ideals in the three chapters Stanley decompositions by Jürgen Herzog Edge ideals by Adam Van Tuyl and Local cohomology by Josep Ivaréz Montaner The chapters written by top experts include computer tutorials that emphasize the computational aspects of the respective areas Monomial ideals and algebras are in a sense among the simplest structures in commutative algebra and the main objects of combinatorial commutative algebra Also they are of major importance for at least three reasons Firstly Gröbner basis theory allows us to treat certain problems on general polynomial ideals by means of monomial

ideals Secondly the combinatorial structure of monomial ideals connects them to other combinatorial structures and allows us to solve problems on both sides of this correspondence using the techniques of each of the respective areas And thirdly the combinatorial nature of monomial ideals also makes them particularly well suited to the development of algorithms to work with them and then generate algorithms for more general structures **Commutative Algebra** Marco

Fontana, Salah-Eddine Kabbaj, Bruce Olberding, Irena Swanson, 2010-09-29 Commutative algebra is a rapidly growing subject that is developing in many different directions This volume presents several of the most recent results from various areas related to both Noetherian and non Noetherian commutative algebra This volume contains a collection of invited survey articles by some of the leading experts in the field The authors of these chapters have been carefully selected for their important contributions to an area of commutative algebraic research Some topics presented in the volume include generalizations of cyclic modules zero divisor graphs class semigroups forcing algebras syzygy bundles tight closure Gorenstein dimensions tensor products of algebras over fields as well as many others This book is intended for researchers and graduate students interested in studying the many topics related to commutative algebra **Lecture Notes in Pure**

and Applied Mathematics ,1982 **The Quarterly Journal of Pure and Applied Mathematics** ,1900 Quarterly Journal of Pure and Applied Mathematics ,1898 **Notices of the American Mathematical Society** American

Mathematical Society,1976 Contains articles of significant interest to mathematicians including reports on current mathematical research Report on European Dock-yards Philip Hichborn,1889 Algebraic, Number Theoretic, and Topological Aspects of Ring Theory Jean-Luc Chabert, Marco Fontana, Sophie Frisch, Sarah Glaz, Keith Johnson, 2023-07-07 This volume has been curated from two sources presentations from the Conference on Rings and Polynomials Technische Universit t Graz Graz Austria July 19 24 2021 and papers intended for presentation at the Fourth International Meeting on Integer valued Polynomials and Related Topics CIRM Luminy France which was cancelled due to the pandemic The collection ranges widely over the algebraic number theoretic and topological aspects of rings algebras and polynomials Two areas of particular note are topological methods in ring theory and integer valued polynomials The book is dedicated to the memory of Paul Jean Cahen a coauthor or research collaborator with some of the conference participants and a friend to many of the others This collection contains a memorial article about Paul Jean Cahen written by his longtime research collaborator and coauthor Jean Luc Chabert Irregular Serials & Annuals ,1987 *Number Theory and Its Applications* Serguei Stepanov, C.Y. Yildirim, 1998-11-23 Addresses contemporary developments in number theory and coding theory originally presented as lectures at summer school held at Bilkent University Ankara Turkey Includes many results in book form for the first time Subject Guide to Books in Print ,2001 **Mathematical Reviews** ,2005
