**Encyclopedia of Evolution** Stanley A. Rice, 2009 Evolutionary science is not only one of the greatest breakthroughs of modern science but also one of the most controversial Perhaps more than any other scientific area evolutionary science has caused us all to question what we are where we came from and how we relate to the rest of the universe Encyclopedia of Evolution contains more than 200 entries that span modern evolutionary science and the history of its development This comprehensive volume clarifies many common misconceptions about evolution For example many people have grown up being told that the fossil record does not demonstrate an evolutionary pattern and that there are many missing links In fact most of these missing links have been found and their modern representatives are often still alive today The biographical entries represent evolutionary scientists within the United States who have had and continue to have a major impact on the broad outline of evolutionary science The biographies chosen reflect the viewpoints of scientists

working within the United States Five essays that explore interesting questions resulting from studies in evolutionary science are included as well The appendix consists of a summary of Charles Darwin's Origin of Species which is widely considered to be the foundational work of evolutionary science and one of the most important books in human history The five essays include How much do genes control human behavior What are the ghosts of evolution Can an evolutionary scientist be religious Why do humans die Are humans alone in the universe Cognition-Based Evolution William B. Miller, 2023-06-23 Cognition Based Evolution is the first comprehensive alternative to 20th century Neodarwinism proposing a radical 21st century evolutionary framework with a novel point of origination all cells are intelligent and must measure uncertain environmental information to sustain themselves In Cognition Based Evolution life is defined by cognition From this differential stance evolutionary biology transforms into the science of why how what and with whom cells measure and communicate under stressful environmental conditions Life's context is uncertain environmental information communication is its means and genes are its tools Evolution is its yield as continuous non random self referential cellular problem solving
