[International Reflections on the Netherlands Didactics of Mathematics](#) Marja van den Heuvel-Panhuizen,2019-08-13 This open access book inspired by the ICME 13 Thematic Afternoon on European Didactic Traditions takes readers on a journey with mathematics education researchers, developers and educators in eighteen countries who reflect on their experiences with Realistic Mathematics Education (RME) the domain specific instruction theory for mathematics education developed in the Netherlands since the late 1960s. Authors from outside the Netherlands discuss what aspects of RME appeal to them their criticisms of RME and their past and current RME based projects. It is clear that a particular approach to mathematics education cannot simply be transplanted to another country. As such in eighteen chapters the authors describe how they have adapted RME to their individual circumstances and view on mathematics education and tell their personal stories about how RME has influenced their thinking on mathematics education

[Elementary Science Methods](#) Lauren Madden,2022-01-12 As teachers and parents we often hear that children are the best scientists. Great science teachers tune in to children's interests and observations to create engaging and effective lessons. This focus on the innate curiosity of children or humans overall is celebrated and used to justify and support efforts around STEM teaching and learning. Yet when we discuss elementary school teachers we often hear many inside and outside the classroom report that these teachers dislike, fear and feel uncomfortable with science. This is exactly the opposite approach from what is universally recommended by science education scholars. This practical textbook meets the immediate contextual needs of future and current elementary teachers by using an assets based approach to science teaching showing how to create inquiry based lessons, differentiate instruction and lesson design based on children's developmental ages and needs and providing easy to use tools to advocate for scientific teaching and learning guided by the Next Generation Science Standards (NGSS).

[Differentiating By Student Learning Preferences](#) Joni Turville,2013-11-20 This book shows teachers how to differentiate instruction based on their students' learning preferences. Included are strategies and lesson plans for visual, auditory and kinesthetic learners, analytical, practical and creative learners and multiple intelligences etc. Also included are over 50 blackline masters which you can copy or download to use in your classroom
