Basic Structures Of Function Field Arithmetic:

Basic Structures of Function Field Arithmetic David Goss, 1997-11-18 From the reviews The book is a thorough and very readable introduction to the arithmetic of function fields of one variable over a finite field by an author who has made fundamental contributions to the field It serves as a definitive reference volume as well as offering graduate students with a solid understanding of algebraic number theory the opportunity to quickly reach the frontiers of knowledge in an important area of mathematics The arithmetic of function fields is a universe filled with beautiful surprises in which familiar objects from classical number theory reappear in new guises and in which entirely new objects play important roles Goss clear exposition and lively style make this book an excellent introduction to this fascinating field MR 97i 11062 **Function Field Arithmetic** Dinesh S. Thakur, 2004 This book provides an exposition of function field arithmetic with emphasis on recent developments concerning Drinfeld modules the arithmetic of special values of transcendental functions such as zeta and gamma functions and their interpolations diophantine approximation and related interesting open problems Basic Structures of Function Field Arithmetic David Goss, 2012-12-06 From the reviews The book is a thorough and very readable introduction to the arithmetic of function fields of one variable over a finite field by an author who has made fundamental contributions to the field It serves as a definitive reference volume as well as offering graduate students with a solid understanding of algebraic number theory the opportunity to quickly reach the frontiers of knowledge in an important area of mathematics The arithmetic of function fields is a universe filled with beautiful surprises in which familiar objects from classical number theory reappear in new guises and in which entirely new objects play important roles Goss clear exposition and lively style make this book an excellent introduction to this fascinating field MR 97i 11062 **Function Field Arithmetic** Dinesh S Thakur, 2004-06-01 This book provides an exposition of function field arithmetic with emphasis on recent developments concerning Drinfeld modules the arithmetic of special values of transcendental functions such as zeta and gamma functions and their interpolations diophantine approximation and related interesting open problems While it covers many topics treated in *Basic Structures of Function Field Arithmetic* by David Goss it complements that book with the inclusion of recent developments as well as the treatment of new topics such as diophantine approximation hypergeometric functions modular forms transcendence automata and solitons There is also new work on multizeta values and log algebraicity The author has included numerous worked out examples Many open problems which can serve as good thesis problems are discussed **Function Field Arithmetic** Dinesh S. Arithmetic Geometry over Global Function Fields Gebhard Böckle, David Burns, David Goss, Dinesh Thakur, Fabien Trihan, Douglas Ulmer, 2014-11-13 This volume collects the texts of five courses given in the Arithmetic Geometry Research Programme 2009 2010 at the CRM Barcelona All of them deal with characteristic p global fields the common theme around which they are centered is the arithmetic of L functions and other special functions investigated in various aspects Three courses examine some of the most important recent ideas in the positive characteristic theory discovered by Goss a field in tumultuous development which is seeing a number of spectacular advances they cover respectively crystals over function fields with a number of applications to L functions of t motives gamma and zeta functions in characteristic p and the binomial theorem The other two are focused on topics closer to the classical theory of abelian varieties over number fields they give respectively a thorough introduction to the arithmetic of Jacobians over function fields including the current status of the BSD conjecture and its geometric analogues and the construction of Mordell Weil groups of high rank and a state of the art survey of Geometric Iwasawa Theory explaining the recent proofs of various versions of the Main Conjecture in the commutative and non commutative settings

Number Fields and Function Fields - Two Parallel Worlds Gerard B. M. van der Geer, BJJ Moonen, René Schoof, 2006-11-24 Ever since the analogy between number fields and function fields was discovered it has been a source of inspiration for new ideas and a long history has not in any way detracted from the appeal of the subject As a deeper understanding of this analogy could have tremendous consequences the search for a unified approach has become a sort of Holy Grail The arrival of Arakelov's new geometry that tries to put the archimedean places on a par with the finite ones gave a new impetus and led to spectacular success in Faltings' hands There are numerous further examples where ideas or techniques from the more geometrically oriented world of function fields have led to new insights in the more arithmetically oriented world of number fields or vice versa These invited articles by leading researchers in the field explore various aspects of the parallel worlds of function fields and number fields Topics range from Arakelov geometry the search for a theory of varieties over the field with one element via Eisenstein series to Drinfeld modules and t motives This volume is aimed at a wide audience of graduate students mathematicians and researchers interested in geometry and arithmetic and their connections
