Martinez,2014-12-15 This primer provides an accessible introduction to MATLAB version 8 and its extensive functionality for statistics Fulfilling the need for a practical user's guide the book covers capabilities in the main MATLAB package the Statistics Toolbox and the student version of MATLAB presenting examples of how MATLAB can be used to analyze data It explains how to determine what method should be used for analysis and includes figures visual aids and access to a companion website with data sets and additional examples

### **Visualization and Verbalization of Data**

Jorg Blasius,Michael Greenacre,2014-04-10 Visualization and Verbalization of Data shows how correspondence analysis and related techniques enable the display of data in graphical form which results in the verbalization of the structures in data Renowned researchers in the field trace the history of these techniques and cover their current applications The first part of the book explains the historical origins of correspondence analysis and associated methods The second part concentrates on the contributions made by the school of Jean Paul Benzcri and related movements such as social space and geometric data analysis Although these topics are viewed from a French perspective the book makes them understandable to an international audience Throughout the text well known experts illustrate the use of the methods in practice Examples include the spatial visualization of multivariate data cluster analysis in computer science the transformation of a textual data set into numerical data the use of quantitative and qualitative variables in multiple factor analysis different possibilities of recoding data prior to visualization and the application of duality diagram theory to the analysis of a contingency table
