Building Information Modeling André Borrmann, Markus König, Christian Koch, Jakob Beetz, 2018-09-19 Building Information Modeling BIM refers to the consistent and continuous use of digital information throughout the entire lifecycle of a built facility including its design construction and operation In order to exploit BIM methods to their full potential a fundamental grasp of their key principles and applications is essential Accordingly this book combines discussions of theoretical foundations with reports from the industry on currently applied best practices The book's content is divided into six parts Part I discusses the technological basics of BIM and addresses computational methods for the geometric and semantic modeling of buildings as well as methods for process modeling Next Part II covers the important aspect of the interoperability of BIM software products and describes in detail the standardized data format Industry Foundation Classes It presents the different classification systems discusses the data format CityGML for describing 3D city models and COBie for handing over data to clients and also provides an overview of BIM programming tools and interfaces Part III is dedicated to the philosophy organization and technical implementation of BIM based collaboration and discusses the impact on legal issues including construction contracts In turn Part IV covers a wide range of BIM use cases in the different lifecycle phases of a built facility including the use of BIM for design coordination structural analysis energy analysis code compliance checking quantity take off prefabrication progress monitoring and operation In Part V a number of

design and construction companies report on the current state of BIM adoption in connection with actual BIM projects and discuss the approach pursued for the shift toward BIM including the hurdles taken. Lastly Part VI summarizes the book's content and provides an outlook on future developments. The book was written both for professionals using or programming such tools and for students in Architecture and Construction Engineering programs.

Building Information Modelling (BIM) in Design, Construction and Operations II A. Galiano-Garrigos, L. Mahdjoubi, C.A. Brebbia, 2017-08-09. The papers presented at Building Information Modelling 2017 BIM are from a range of forums including plenary papers, workshops, seminars, and panel sessions. The conference was attended by experts from industry practice and academia sharing their work on key topics: the development of innovative solutions and the identification of future trends. The volume gives details of how BIM tools and techniques have fundamentally altered the manner in which modern construction teams operate the processes through which designs are evolved and the relationships between conceptual design, construction, and life cycle stages. BIM is essentially value creating collaboration throughout the entire life cycle of an asset, underpinned by the statistics attached to them and has far-reaching consequences on both building procurement and infrastructure. BIM 2017 papers cover topics such as BIM in design coordination, Construction operations, Building operation and maintenance, BIM and sustainability, Collaborative working and practices, Facilities management, integration and GIS integration, Automation in construction, Health and safety, BIM and interoperability, Life cycle project management, Cultural heritage, BIM and Robotics, Risk analysis and management, and Emergency analysis, planning and management.

Building Information Modelling (BIM) in Design, Construction and Operations IV J. Casares, A. Galiano Garrigós, 2021-12-29. Containing papers presented at the 4th International Conference on Building Information Modelling BIM in Design, Construction and Operations, this volume brings together the research of experts from industry practice and academia. It describes innovative solutions and predictions for future trends across key BIM-related topics. The modern construction industry and built environment disciplines have been transformed through the development of new and innovative BIM tools and techniques. These have fundamentally altered the manner in which construction teams operate the processes through which designs are evolved and the relationships between conceptual design, construction, and life cycle stages. BIM is essentially value creating collaboration throughout the entire life cycle of an asset, underpinned by the data attached to them. BIM has far-reaching consequences on both building procurement and infrastructure. This recent emergence constitutes one of the most exciting developments in the field of the Built Environment. These advances have offered project teams multi-sensory collaborative tools and opportunities for new communication structures. The included papers cover such topics as BIM in design coordination, BIM in construction operations, BIM in building operation and maintenance, BIM and sustainability, BIM and collaborative working and practices, BIM Facilities management, integration, BIM GIS integration, BIM and automation in construction, BIM and health and safety, BIM standards, BIM and interoperability, BIM and life cycle project management, BIM and cultural heritage.
