Building an Intelligence-Led Security Program Allan Liska, 2014-12-08 As recently as five years ago securing a network meant putting in a firewall intrusion detection system and installing antivirus software on the desktop Unfortunately attackers have grown more nimble and effective meaning that traditional security programs are no longer effective Today's effective cyber security programs take these best practices and overlay them with intelligence Adding cyber threat intelligence can help security teams uncover events not detected by traditional security platforms and correlate seemingly disparate events across the network Properly implemented intelligence also makes the life of the security practitioner easier by helping him more effectively prioritize and respond to security incidents The problem with current efforts is that many security practitioners don't know how to properly implement an intelligence led program or are afraid that it is out of their budget Building an Intelligence Led Security Program is the first book to show how to implement an intelligence led program in your enterprise on any budget It will show you how to implement a security information and event management system collect and analyze logs and how to practice real cyber threat intelligence You'll learn how to understand your network in depth so that you can protect it in the best possible way Provides a roadmap and direction on how to build an intelligence led information security program to protect your company Learn how to understand your network through logs and client monitoring so you can effectively evaluate threat intelligence Learn how to use popular tools such as BIND SNORT squid STIX TAXII CyBox and splunk to conduct network intelligence [How to Define and Build an Effective Cyber Threat Intelligence Capability](#) Henry Dalziel, 2014-12-05 Intelligence Led Security How to Understand Justify and Implement a New Approach to Security is a concise review of the concept of Intelligence Led Security Protecting a business including its information and intellectual property physical infrastructure employees and reputation has become increasingly difficult Online threats come from all sides internal leaks and external adversaries domestic hackers and overseas cybercrime syndicates targeted threats and mass attacks And these threats run the gamut from targeted to indiscriminate to entirely accidental Among thought leaders and advanced organizations the consensus is now clear Defensive security measures antivirus software firewalls and other technical controls and post attack mitigation strategies are no longer sufficient To adequately protect company assets and ensure business continuity organizations must be more proactive Increasingly this proactive stance is being summarized by the phrase Intelligence Led Security the use of data to gain insight into what can happen who is likely to be involved how they are likely to attack and if possible to predict when attacks are likely to come In this book the authors review the current threat scape and why it requires this new approach offer a clarifying definition of what Cyber Threat Intelligence is describe how to communicate its value to business and lay out concrete steps toward implementing Intelligence Led Security Learn how to create a proactive strategy for digital security Use data analysis and threat forecasting to predict and prevent attacks before they start Understand the
