Open-Source Lab Joshua M. Pearce,2013-10-04 Open Source Lab How to Build Your Own Hardware and Reduce Scientific Research Costs details the development of the free and open source hardware revolution The combination of open source 3D printing and microcontrollers running on free software enables scientists engineers and lab personnel in every discipline to develop powerful research tools at unprecedented low costs After reading Open Source Lab you will be able to Lower equipment costs by making your own hardware Build open source hardware for scientific research Actively participate in a community in which scientific results are more easily replicated and cited Numerous examples of technologies and the open source user and developer communities that support them Instructions on how to take advantage of digital design sharing Explanations of Arduinos and RepRaps for scientific use A detailed guide to open source hardware licenses and basic principles of intellectual property **Hyper-Exploitation in the Hacker Movement** Yilmaz Aliskan,2023-09-05 In this book Yilmaz Aliskan discusses the capitalist exploitation of digital media and examines how free time and creativity can be exploited in open source communities with corporations often benefiting from community generated knowledge Focusing on open source hardware communities in which hackers give up a considerable amount of free time and creativity to create open technology Aliskan investigates how free time becomes a hyper exploited commodity from which capital is increasingly accumulated Whereas paid workers are still often exploited Aliskan posits that open source workers are further hyper exploited by technology companies as they receive no compensation for their labour Ultimately this book reveals how the time and activity of volunteers in open source communities are ripe for capitalist exploitation that blurs the line between leisure and work time often disguised by assertions that such labour is fun or in line with volunteers personal interests or values Scholars of communication digital media sociology and labour studies will find this book of particular interest *The American Artisan and Hardware Record* ,1915 **The Economist** ,2008 **EDN** ,2009 Building Embedded Linux Systems Karim Yaghmour,2003 Linux is being adopted by an increasing number of embedded systems developers who have been won over by its sophisticated scheduling and networking its cost free license its open development model and the support offered by rich and powerful programming tools While there is a great deal of hype surrounding the use of Linux in embedded systems there is not a lot of practical information Building Embedded Linux Systems is the first in depth hard core guide to putting together an embedded system based on the Linux kernel This indispensable book features arcane and previously undocumented procedures for Building your own GNU development toolchain Using an efficient embedded development framework Selecting configuring building and installing a target specific kernel Creating a complete target root filesystem Setting up manipulating and using solid state storage devices Installing and configuring a bootloader for the target Cross compiling a slew of utilities and packages Debugging your embedded system using a plethora of tools and

techniques Details are provided for various target architectures and hardware configurations including a thorough review of Linux s support for embedded hardware All explanations rely on the use of open source and free software packages By presenting how to build the operating system components from pristine sources and how to find more documentation or help this book greatly simplifies the task of keeping complete control over one s embedded operating system whether it be for technical or sound financial reasons Author Karim Yaghmour a well known designer and speaker who is responsible for the Linux Trace Toolkit starts by discussing the strengths and weaknesses of Linux as an embedded operating system Licensing issues are included followed by a discussion of the basics of building embedded Linux systems The configuration setup and use of over forty different open source and free software packages commonly used in embedded Linux systems are also covered uClibc BusyBox U Boot OpenSSH thttpd tftp strace and gdb are among the packages discussed **Keith's Magazine on Home Building** ,1916 **Iron Age and Hardware, Iron and Industrial Reporter** ,1925 **Embedded Linux Systems with the Yocto Project** Rudolf J. Streif,2016-04-18 Build Complete Embedded Linux Systems Quickly and Reliably Developers are increasingly integrating Linux into their embedded systems It supports virtually all hardware architectures and many peripherals scales well offers full source code and requires no royalties The Yocto Project makes it much easier to customize Linux for embedded systems If you re a developer with working knowledge of Linux Embedded Linux Systems with the Yocto ProjectTM will help you make the most of it An indispensable companion to the official documentation this guide starts by offering a solid grounding in the embedded Linux landscape and the challenges of creating custom distributions for embedded systems You ll master the Yocto Project s toolbox hands on by working through the entire development lifecycle with a variety of real life examples that you can incorporate into your own projects Author Rudolf Streif offers deep insight into Yocto Project s build system and engine and addresses advanced topics ranging from board support to compliance management You ll learn how to Overcome key challenges of creating custom embedded distributions Jumpstart and iterate OS stack builds with the OpenEmbedded Build System Master build workflow architecture and the BitBake Build Engine Quickly troubleshoot build problems Customize new distros with built in blueprints or from scratch Use BitBake recipes to create new software packages Build kernels set configurations and apply patches Support diverse CPU architectures and systems Create Board Support Packages BSP for hardware specific adaptations Provide Application Development Toolkits ADT for round trip development Remotely run and debug applications on actual hardware targets Ensure open source license compliance Scale team based projects with Toaster Build History Source Mirrors and Autobuilder *Building Trade Catalogs* Associated Builders Catalog Co.
