
Introducing Ansoft Designer®

Ansoft Designer® is the first suite of design tools to fully integrate high-frequency, physics-based electromagnetic simulation, modeling, and automation into a seamless environment for circuit and system analysis. Whether your design challenge is a Bluetooth® transceiver, a radar system, or an MMIC or RFIC, Designer gives you complete control over every design task from within one simple, unified environment.

The key to Designer's integration is Solver on Demand™, a unique capability that orchestrates the use of multiple solvers while still giving you complete control. Designer extends this automation and integration even further by enabling you to rapidly import work created in other types of design software as easily as if you created it within Designer itself.

Multiple Solvers

Designer combines several powerful simulators to support designs in multiple physical implementations.

The Nexxim Simulator

Nexxim® is Ansoft's state-of-the-art circuit simulator for RF, analog, and mixed-signal designs. Nexxim combines transistor-level simulation accuracy, high execution speed, and robust capability to handle circuits with thousands of active and passive elements. Nexxim simulates in all three domains—DC, time, and frequency—from the same set of device models. Nexxim offers the following simulation tools:

- DC analysis calculates the circuit's DC operating point and is the basis for other analyses.
- Transient analysis calculates the time-domain behavior of the circuit. Nexxim transient analysis incorporates a new, Ansoft-proprietary variable time-step integration formula and advanced error estimation and control. The analysis can include S-parameter input data files for accurate analysis in the time domain.
- Harmonic balance analysis calculates the frequency-domain responses of the circuit. Nexxim
