

...this can speed up the distribution of medication, thus speeding up the drug's action.

Pharmacogenomics. Most medications are dosed as "one size fits all." Each person's genetic makeup affects how that person responds to medications. *Pharmacogenomics* or *pharmacogenetics* is the study of how genetic factors influence a person's metabolic response to a specific medication. Pharmacogenomics testing usually requires a small blood or saliva sample. The sample is analyzed to determine if a specific medication will be an effective treatment for a particular individual. Testing can determine the best dose of medication and if the person could have serious *adverse reactions* (unexpected or life-threatening reaction) from the medication. A different test is required for each medication. Pharmacogenomics is largely used in cancer treatments, but it is becoming more common in other areas of medicine.

Therapeutic Effects

Medications can have local or systemic effects. Medication effects that are seen at the site of administration are *local effects*. Medication effects that are seen throughout the body are *systemic effects*. Each medication has one or more *therapeutic effect* or *desired effect*. This is the intended action of the medication. For instance, the therapeutic effect of a pain reliever is to reduce pain.

Sometimes multiple doses are needed to achieve the therapeutic effect. Other times just one dose of medication can achieve the therapeutic effect. For some medications, the provider may prescribe a higher initial dose, called a *loading dose*. This helps to quickly increase the medication level in the blood. A loading dose helps the person achieve the **therapeutic range** sooner. A *maintenance dose* is the amount of medication needed to keep the blood levels within the therapeutic range. If the blood levels go beyond the therapeutic range, the person can experience signs and symptoms of toxicity. This is considered a *toxic dose* of medication. A *lethal dose* is the amount of medication that could kill a person.
