Camarinha-Matos, Hamideh Afsarmanesh, 2007-05-08 A research agenda for collaborative networks Purpose Many practical application experiments and pilot cases nowadays provide evidence on what works and what still remains as a challenge for collaborative networked organizations CNOs The fast evolution of the information and communication technologies and in particular the so called Internet technologies also represents an

important motivator for the emergence of new forms of collaboration. However, most efforts in this area are highly fragmented, considering only some partial facets and not a holistic perspective that would be required. We are therefore at a point in which it is necessary to define much more consolidated and sustainable research strategies for a second phase of research and development in this area. This book addresses the main disciplines involved in CNOs. It further synthesizes the views and opinions expressed by a large number of visionaries from the main disciplines involved in CNOs and offers a comprehensive set of recommendations for the establishment of a research agenda on collaborative networks. As recognized experts in their specific areas, different authors in this book have presented work that is backed by a large number of research results, each focusing on specific facets of collaborative networks and coming out of a large number of international and national projects.

Advances in Engineering Education in the Middle East and North Africa Mahmoud Abdulwahed, Mazen O. Hasna, Jeffrey E. Froyd, 2015-11-18. This book provides a collection of the latest advances in engineering education in the Middle East and North Africa (MENA) region and sheds insights for future development. It is one of the first books to address the lack of comprehensive literature on undergraduate engineering curricula and stimulates intellectual and critical discourse on the next wave of engineering innovation and education in the MENA region. The authors look at recent innovations through the lens of four topics: learning and teaching, curriculum development, assessment and accreditation, and challenges and sustainability. They also include analyses of pedagogical innovations, models for transforming engineering education, and methods for using technological innovations to enhance active learning. Engineering education topics on issues such as construction, health and safety, urban design, and environmental engineering in the context of the MENA region are covered in further detail. The book concludes with practical recommendations for implementations in engineering education. This is an ideal book for engineering education academics, engineering curriculum developers, and accreditation specialists and deans and leaders in engineering education.
